**Altered Expression of Proteins in Cancer: Function and Potential Therapeutic Targets, Volume II** João Pessoa, Maria Teresa Valenti, Tamrat Abebe Zeleke, Lorenzo Gerratana, Paula Chiarella, Julia Kzhyskowska, Carlos Pérez-Plasencia, Nadège Bellance, 2023-08-02 Updates in the Understanding and Management of Thyroid Cancer Thomas J. Fahey, 2012-03-21 Thyroid cancer can be either common or rare and takes several forms in multiple populations such as children and adolescents The chapters in this book which provide state of the art knowledge in understanding and treating the condition are therefore welcome Our understanding of thyroid cancer is advanced by several chapters on its incidence in a Spanish population the functionality of p53 and the use of microarray technology in research Diagnostic issues include the roles of glycosylation and glycoproteins and use of a camera to evaluate the in vivo biodistributions and internal medical dosimetries of Iodine 131 The majority of chapters address the range of possible treatment protocols such as IGF signalling surgical management sentinel lymph node biopsy radioiodine treatment and differentiation therapy Transforming Growth Factor-Beta in Cancer Therapy, Volume II Sonia B. Jakowlew, 2010-01-01 Transforming Growth Factor B in Cancer Therapy Volume II Cancer Treatment and Therapy The chapters in this volume confer an abundance of knowledge about the current state of our understanding of transforming growth factor B TGF B in cancer treatment and therapy Unlike several more traditional positive polypeptide growth factors that stimulate cellular proliferation the prototypical TGF B is now known to inhibit the growth of most normal cell types including those of epithelial and mesenchymal origin However there are examples of cell types that can be stimulated by TGF B under certain conditions TGF B also induces the accumulation of matrix molecules by stimulating their synthesis as well as inhibiting their degradation Moreover TGF B induces apoptosis of certain cell types thereby restricting their proliferation Overactivity of TGF has been linked to several diseases For instance the effect of TGF on matrix accumulation contributes to fibrotic conditions like glomerulonephritis lung fibrosis and liver cirrhosis 1 TGF has a very complicated role in cancer that is only beginning to be understood **Signaling Pathways in Cancer Pathogenesis and Therapy** David A. Frank, 2011-11-12 In recent years increasing evidence has suggested that abnormal activation of signaling pathways is a critical event in cancer pathogenesis In particular activation of these pathways can lead to inappropriate cellular survival proliferation pluripotency invasion metastasis and angiogenesis Thus understanding the mechanisms by which signaling pathways become subverted in a cancer cell can provide insight into critical events in cancer pathogenesis Furthermore as our ability to target specific molecular interactions advances we now have the ability to design small molecules protein therapeutics and other forms of targeted therapies By focusing on the specific molecular abnormalities in a cancer cell these agents hold the potential to be much more effective and much less toxic than current cytotoxic therapies *The p53 Tumor Suppressor Pathway and Cancer* Gerard P. Zambetti, 2007-07-03 The current year 2004 marks the Silver Anniversary of the discovery of the p53 tumor suppressor The emerging eld rst

considered p53 as a viral antigen and then as an oncogene that cooperates with activated ras in transforming primary cells in culture Fueling the concept of p53 acting as a transforming factor p53 expression was markedly elevated in various transformed and tumorigenic cell lines when compared to normal cells In a simple twist of fate most of the studies conducted in those early years inadvertently relied on a point mutant of p53 that had been cloned from a normal mouse genomic library A bona fide wild type p53 cDNA was subsequently isolated ironically from a mouse teratocarcinoma cell line A decade after its discovery p53 was shown to be a tumor suppressor that protects against cancer It is now recognized that approximately half of all human tumors arise due to mutations within the p53 gene As remarkable as this number may seem it significantly underrepresents how often the p53 pathway is targeted during tumorigenesis It is my personal view as well as many in the field that the p53 signaling pathway is corrupted in nearly 100% of tumors If you are interested in understanding cancer and how it develops you must begin by studying p53 and its pathway After demonstrating that p53 functions as a tumor suppressor the field exploded and p53 became a major focus of scientists around the world
