

8. The three lines do not intersect in a common point (see figure). This system has no solution.

The augmented matrix of the system is

$$\left[ \begin{array}{cc|c} 1 & -1 & 3 \\ 1 & 1 & 1 \\ 2 & 3 & 6 \end{array} \right]$$

and the reduced row echelon form of this matrix (details omitted) is:

$$\left[ \begin{array}{cc|c} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{array} \right]$$

The last row corresponds to the equation  $0 = 1$ , so the system is inconsistent.

9. (a) The solution set of the equation  $7x - 5y = 3$  can be described parametrically by (for example) solving the equation for  $x$  in terms of  $y$  and then making  $y$  into a parameter. This leads to  $x = \frac{2t+3}{5}$ ,  $y = t$ , where  $-\infty < t < \infty$ .
- (b) The solution set of  $3x_1 - 5x_2 + 4x_3 = 7$  can be described by solving the equation for  $x_1$  in terms of  $x_2$  and  $x_3$ , then making  $x_2$  and  $x_3$  into parameters. This leads to  $x_1 = \frac{7+5x_2-4x_3}{3}$ ,  $x_2 = s$ ,  $x_3 = t$ , where  $-\infty < s, t < \infty$ .
- (c) The solution set of  $-8x_1 + 2x_2 - 5x_3 + 6x_4 = 1$  can be described by (for example) solving the equation for  $x_1$  in terms of  $x_2$ ,  $x_3$ , and  $x_4$ , then making  $x_2$ ,  $x_3$ , and  $x_4$  into parameters. This leads to  $x_1 = r$ ,  $x_2 = \frac{1+8r+5s-6t}{2}$ ,  $x_3 = s$ ,  $x_4 = t$ , where  $-\infty < r, s, t < \infty$ .
- (d) The solution set of  $3v - 8w + 2x - y + 4z = 0$  can be described by (for example) solving the equation for  $y$  in terms of the other variables, and then making those variables into parameters. This leads to  $v = t_1$ ,  $w = t_2$ ,  $x = t_3$ ,  $y = 3t_1 - 8t_2 + 2t_3 + 4t_4$ ,  $z = t_4$ , where  $-\infty < t_1, t_2, t_3, t_4 < \infty$ .
10. (a)  $x = 2 - 10t$ ,  $y = t$ , where  $-\infty < t < \infty$ .
- (b)  $x_1 = 3 - 3s + 12t$ ,  $x_2 = s$ ,  $x_3 = t$ , where  $-\infty < s, t < \infty$ .
- (c)  $x_1 = r$ ,  $x_2 = s$ ,  $x_3 = t$ ,  $x_4 = 20 - 4r - 2s - 3t$ , where  $-\infty < r, s, t < \infty$ .
- (d)  $v = t_1$ ,  $w = t_2$ ,  $x = -t_1 - t_2 + 5t_3 - 7t_4$ ,  $y = t_3$ ,  $z = t_4$ , where  $-\infty < t_1, t_2, t_3, t_4 < \infty$ .
11. (a) If the solution set is described by the equations  $x = 5 + 2t$ ,  $y = t$ , then on replacing  $t$  by  $y$  in the first equation we have  $x = 5 + 2y$  or  $x - 2y = 5$ . This is a linear equation with the given solution set.
- (b) The solution set can also be described by solving the equation for  $y$  in terms of  $x$ , and then making  $x$  into a parameter. This leads to the equations  $x = t$ ,  $y = \frac{1}{2}t - \frac{5}{2}$ .

**Books in Print Supplement**, 2002 *Algebraic Number Theory* J.S. Chahal, 2021-07-21 This book offers the basics of algebraic number theory for students and others who need an introduction and do not have the time to wade through the voluminous textbooks available It is suitable for an independent study or as a textbook for a first course on the topic The author presents the topic here by first offering a brief introduction to number theory and a review of the prerequisite material then presents the basic theory of algebraic numbers The treatment of the subject is classical but the newer approach discussed at the end provides a broader theory to include the arithmetic of algebraic curves over finite fields and even suggests a theory for studying higher dimensional varieties over finite fields It leads naturally to the Weil conjecture and some delicate questions in algebraic geometry About the Author Dr J S Chahal is a professor of mathematics at Brigham Young University He received his Ph D from Johns Hopkins University and after spending a couple of years at the University of Wisconsin as a post doc he joined Brigham Young University as an assistant professor and has been there ever since He specializes and has published several papers in number theory For hobbies he likes to travel and hike His book *Fundamentals of Linear Algebra* is also published by CRC Press

**Number Theory and Geometry through History** J. S. Chahal, 2025-05-22 This is a unique book that teaches mathematics and its history simultaneously Developed from a course on the history of mathematics this book is aimed at mathematics teachers who need to learn more about mathematics than its history and in a way they can communicate it to middle and high school students The author hopes to overcome through the teachers using this book math phobia among these students *Number Theory and Geometry through History* develops an appreciation of mathematics by not only looking at the work of individual including Euclid Euler Gauss and more but also how mathematics developed from ancient civilizations Brahmins Hindu priests devised our current decimal number system now adopted throughout the world The concept of limit which is what calculus is all about was not alien to ancient civilizations as Archimedes used a method similar to the Riemann sums to compute the surface area and volume of the sphere No theorem here is cited in a proof that has not been proved earlier in the book There are some exceptions when it comes to the frontier of current research Appreciating mathematics requires more than thoughtlessly reciting first the ten by ten then twenty by twenty multiplication tables Many find this approach fails to develop an appreciation for the subject The

author was once one of those students Here he exposes how he found joy in studying mathematics and how he developed a lifelong interest in it he hopes to share The book is suitable for high school teachers as a textbook for undergraduate students and their instructors It is a fun text for advanced readership interested in mathematics     *Set Theory* Robert André, 2025-04-21 Contemporary students of mathematics differ considerably from those of half a century ago In spite of this many textbooks written decades ago and now considered to be classics are still prescribed for students today These texts are not suitable for today's students This text is meant for and written to today's mathematics students Set theory is a pure mathematics endeavor in the sense that it seems to have no immediate applications yet the knowledge and skills developed in such a course can easily branch out to various fields of both pure mathematics and applied mathematics Rather than transforming the reader into a practicing mathematician this book is more designed to initiate the reader to what may be called mathematical thinking while developing knowledge about foundations of modern mathematics Without this insight becoming a practicing mathematician is much more daunting The main objective is twofold The students will develop some fundamental understanding of the foundations of mathematics and elements of set theory in general In the process the student will develop skills in proving simple mathematical statements with mathematical rigor Carefully presented detailed proofs and rigorous chains of logical arguments will guide the students from the fundamental ZFC axioms and definitions to show why a basic mathematical statement must hold true The student will recognize the role played by each fundamental axiom in development of modern mathematics The student will learn to distinguish between a correct mathematical proof and an erroneous one The subject matter is presented while bypassing the complexities encountered when using formal logic
