a third derivative quantity of 1 propanol in the ternary aqueous solution 1 propanol sample species H₂O We use its induced change as a probe of the effect of a sample species on H₂O In this way we clarified what a hydrophobe or a hydrophile and in turn an amphiphile does to H₂O We also apply the same methodology to ions that have been ranked by the Hofmeister series We show that the kosmotropes salting out or stabilizing agents are either hydrophobes or hydration centres and that chaotropes salting in or destabilizing agents are hydrophiles A new differential approach to solution thermodynamics A particularly clear elucidation of the mixing schemes in aqueous solutions A clear understandings on the effects of hydrophobes hydrophiles and amphiphiles to H₂O A clear understandings on the effects of ions on H₂O in relation to the Hofmeister effect A new differential approach to studies in multi component aqueous solutions
