CHAPTER 2

SOLUTIONS TO PROBLEMS

2.1 (i) Income, age, and family background (such as number of siblings) are just a few possibilities. It seems that each of these could be correlated with years of education. (Income and education are probably positively correlated; age and education may be negatively correlated because women in more recent cohorts have, on average, more education; and number of siblings and education are probably negatively correlated.)

(ii) Not if the factors we listed in part (i) are correlated with *educ*. Because we would like to hold these factors fixed, they are part of the error term. But if *u* is correlated with *educ*, then $E(ueduc) \neq 0$, and so SLR.4 fails.

2.3 (i) Let $y_i = GPA_i$, $x_i = ACT_i$, and $n = 8$. Then $\bar{x} = 25.875$, $\bar{y} = 3.2125$, $\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y}) = 5.8125$, and $\sum_{i=1}^n (x_i - \bar{x})^2 = 56.875$. From equation (2.19), we obtain the slope as $\hat{\beta}_1 = 5.8125/56.875 \approx .1022$, rounded to four places after the decimal. From (2.17), $\hat{\beta}_0 = \bar{y} - \hat{\beta}_1 \bar{x} \approx 3.2125 - (.1022)(25.875) \approx .5681$. So we can write

$$GPA = .5681 + .1022 ACT$$

$n = 8.$

The intercept does not have a useful interpretation because *ACT* is not close to zero for the population of interest. If *ACT* is 5 points higher, *GPA* increases by $.1022(5) = .511$.

(ii) The fitted values and residuals — rounded to four decimal places — are given along with the observation number *i* and *GPA* in the following table:

Loss Models: From Data to Decisions, 4e Student Solutions Manual Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot, 2014-08-21 Student Solutions Manual to Accompany Loss Models From Data to Decisions Fourth Edition This volume is organised around the principle that much of actuarial science consists of the construction and analysis of mathematical models which describe the process by which funds flow into and out of an insurance system

Mathematical Formulas for Economists Bernd Luderer, Volker Nollau, Klaus Vettters, 2013-06-29 This collection of formulas constitutes a compendium of mathematics for economics and business It contains the most important formulas statements and algorithms in this significant subfield of modern mathematics and addresses primarily students of economics or business at universities colleges and trade schools But people dealing with practical or applied problems will also find this collection to be an efficient and easy to use work of reference First the book treats mathematical symbols and constants sets and state ments number systems and their arithmetic as well as fundamentals of com binatorics The chapter on sequences and series is followed by mathematics of finance the representation of functions of one and several independent vari ables their differential and integral calculus and by differential and difference equations In each case special emphasis is placed on applications and models in economics The chapter on linear algebra deals with matrices vectors determinants and systems of linear equations This is followed by the representation of struc tures and algorithms of linear programming Finally the reader finds formu las on descriptive statistics data analysis ratios inventory and time series analysis on probability theory events probabilities random variables and distributions and on inductive statistics point and interval estimates tests Some important tables complete the work

Student Solutions Manual to Accompany Basic Econometrics Damodar N. Gujarati, 1988 Gujarati s Basic Econometrics provides an elementary but comprehensive introduction to econometrics without resorting to matrix algebra calculus or statistics beyond the elementary level Because of the way the book is organized it may be used at a variety of levels of rigor For example if matrix algebra is used theoretical exercises may be omitted A CD of data sets is provided with the text

Weibull Models D. N. Prabhakar Murthy, Min Xie, Renyan Jiang, 2004-01-14 A comprehensive perspective on Weibull models The literature on Weibull models is vast disjointed and scattered across many different journals Weibull

Models is a comprehensive guide that integrates all the different facets of Weibull models in a single volume. This book will be of great help to practitioners in reliability and other disciplines in the context of modeling data sets using Weibull models. For researchers interested in these modeling techniques, exercises at the end of each chapter define potential topics for future research. Organized into seven distinct parts, *Weibull Models* covers model analysis, parameter estimation, model validation, and application. Serves as both a handbook and a research monograph. As a handbook, it classifies the different models and presents their properties. As a research monograph, it unifies the literature and presents the results in an integrated manner. Intertwines theory and application. Focuses on model identification prior to model parameter estimation. Discusses the usefulness of the Weibull Probability plot (WPP) in the model selection to model a given data set. Highlights the use of Weibull models in reliability theory. Filled with in-depth analysis. *Weibull Models* pulls together the most relevant information on this topic to give everyone from reliability engineers to applied statisticians involved with reliability and survival analysis a clear look at what Weibull models can offer. *Elementary Econometrics: Theory, Application and Policy* M. S. Mukras, 1993

Theory and Applications of Time Series Analysis and Forecasting Olga Valenzuela, Fernando Rojas, Luis Javier Herrera, Héctor Pomares, Ignacio Rojas, 2023-04-04. This book presents a selection of peer-reviewed contributions on the latest developments in time series analysis and forecasting presented at the 7th International Conference on Time Series and Forecasting (ITISE 2021) held in Gran Canaria, Spain, July 19-21, 2021. It is divided into four parts. The first part addresses general modern methods and theoretical aspects of time series analysis and forecasting, while the remaining three parts focus on forecasting methods in econometrics, time series forecasting and prediction, and numerous other real-world applications. Covering a broad range of topics, the book will give readers a modern perspective on the subject. The ITISE conference series provides a forum for scientists, engineers, educators, and students to discuss the latest advances and implementations in the foundations, theory, models, and applications of time series analysis and forecasting. It focuses on interdisciplinary research encompassing computer science, mathematics, statistics, and econometrics. **Computational Intelligent Data Analysis for Sustainable Development** Ting Yu, Nitesh Chawla, Simeon Simoff, 2016-04-19. Going beyond performing simple analyses, researchers involved in the highly dynamic field of computational intelligent data analysis design algorithms that solve increasingly complex data problems in changing environments, including economic, environmental, and social data. *Computational Intelligent Data Analysis for Sustainable Development* presents novel methodologies for automatically processing these types of data to support rational decision making for sustainable development. Through numerous case studies and applications, it illustrates important data analysis methods, including mathematical optimization, machine learning, signal processing, and temporal and spatial analysis, for quantifying and describing sustainable development problems. With a focus on integrated sustainability analysis, the book presents a large-scale quadratic programming algorithm to expand high-resolution input-output tables from the national scale to the multinational scale to measure the carbon

footprint of the entire trade supply chain It also quantifies the error or dispersion between different reclassification and aggregation schemas revealing that aggregation errors have a high concentration over specific regions and sectors The book summarizes the latest contributions of the data analysis community to climate change research A profuse amount of climate data of various types is available providing a rich and fertile playground for future data mining and machine learning research The book also pays special attention to several critical challenges in the science of climate extremes that are not handled by the current generation of climate models It discusses potential conceptual and methodological directions to build a close integration between physical understanding or physics based modeling and data driven insights The book then covers the conservation of species and ecologically valuable land A case study on the Pennsylvania Dirt and Gravel Roads Program demonstrates that multiple objective linear programming is a more versatile and efficient approach than the widely used benefit targeting selection process Moving on to renewable energy and the need for smart grids the book explores how the ongoing transformation to a sustainable energy system of renewable sources leads to a paradigm shift from demand driven generation to generation driven demand It shows how to maximize renewable energy as electricity by building a supergrid or mixing renewable sources with demand management and storage It also presents intelligent data analysis for real time detection of disruptive events from power system frequency data collected using an existing Internet based frequency monitoring network as well as evaluates a set of computationally intelligent techniques for long term wind resource assessment In addition the book gives an example of how temporal and spatial data analysis tools are used to gather knowledge about behavioral data and address important social problems such as criminal offenses It also applies constraint logic programming to a planning problem the environmental and social impact assessment of the regional energy plan of the Emilia Romagna region of Italy Sustainable development problems such as global warming resource shortages global species loss and pollution push researchers to create powerful data analysis approaches that analysts can then use to gain insight into these issues to support rational decision making This volume shows both the data analysis and sustainable development communities how to use intelligent data analysis tools to address practical problems and encourages researchers to develop better methods

Data Science for Business and Decision Making Luiz Paulo Favero, Patricia Belfiore, 2019-04-11 Data Science for Business and Decision Making covers both statistics and operations research while most competing textbooks focus on one or the other As a result the book more clearly defines the principles of business analytics for those who want to apply quantitative methods in their work Its emphasis reflects the importance of regression optimization and simulation for practitioners of business analytics Each chapter uses a didactic format that is followed by exercises and answers Freely accessible datasets enable students and professionals to work with Excel Stata Statistical Software and IBM SPSS Statistics Software Combines statistics and operations research modeling to teach the principles of business analytics Written for students who want to apply statistics optimization and multivariate modeling to gain competitive advantages in business
