Engineering Agile Big-Data Systems Feeney, Kevin,Davies, Jim,Hellmann, Sebastian,2018-11-05 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the

lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems *Seventh Symposium on Systems Analysis in Forest Resources, Traverse City, Michigan, USA, May 28-31, 1997* ,2000 Programming Visual Basic .NET Jesse Liberty,2003 Completely revised this edition is an essential guide for VB programmers looking to make the change to the NET programming environment
