Topics in Matrix Analysis Roger A. Horn, Charles R. Johnson, 1994-06-24 Building on the foundations of its predecessor volume Matrix Analysis this book treats in detail several topics in matrix theory not included in the previous volume but with important applications and of special mathematical interest As with the previous volume the authors assume a background knowledge of elementary linear algebra and rudimentary analytical concepts Many examples and exercises of varying difficulty are included Linear Operators and Matrices Israel Gohberg, Heinz Langer, 2012-12-06 In September 1998

during the International Workshop on Analysis and Vibrating Systems held in Canmore Alberta Canada it was decided by a group of participants to honour Peter Lancaster on the occasion of his 70th birthday with a volume in the series Operator Theory Advances and Applications Friends and colleagues responded enthusiastically to this proposal and within a short time we put together the volume which is now presented to the reader Regarding acceptance of papers we followed the usual rules of the journal Integral Equations and Operator Theory The papers are dedicated to different problems in matrix and operator theory especially to the areas in which Peter contributed so richly At our request Peter agreed to write an autobiographical paper which appears at the beginning of the volume It continues with the list of Peter's publications We believe that this volume will pay tribute to Peter on his outstanding achievements in different areas of mathematics 1 Gohberg H Langer P ter Lancast r 1929 Operator Theory Advances and Applications Vol 130 1 7 2001 Birkhuser Verlag Basel Switzerland My Life and Mathematics Peter Lancaster I was born in Appleby a small county town in the north of England on November 14th 1929 I had two older brothers and was to have one younger sister My family moved around the north of England as my father's work in an insurance company required **Matrix and Operator Equations and**

Numerical Solution of Time-Dependent Advection-Diffusion-Reaction Equations Willem Hundsdorfer, Jan G.

Verwer, 2013-04-17 This book deals with numerical methods for solving partial differential equations PDEs coupling advection diffusion and reaction terms with a focus on time dependency A combined treatment is presented of methods for hyperbolic problems thereby emphasizing the one way wave equation methods for parabolic problems and methods for stiff and non stiff ordinary differential equations ODEs With regard to time dependency we have attempted to present the algorithms and the discussion of their properties for the three different types of differential equations in a unified way by using semi discretizations i.e the method of lines whereby the PDE is transformed into an ODE by a suitable spatial discretization In addition for hyperbolic problems we also discuss discretizations that use information based on characteristics Due to this combination of methods this book differs substantially from more specialized textbooks that deal exclusively with numerical methods for either PDEs or ODEs We treat integration methods suitable for both classes of problems This combined treatment offers a clear advantage On the one hand in the field of numerical ODEs highly valuable methods and results exist which are of practical use for solving time dependent PDEs something which is often not fully exploited by numerical PDE researchers Although many problems can be solved by Euler's method or the Crank Nicolson method better alternatives are often available which can significantly reduce the computational effort needed to solve practical problems
