and distance learning may sound fairly straightforward. Instead of learning in a classroom setting, students learn at home with the assistance of online resources. But classroom learning does not always translate easily to online settings, particularly at the elementary level where children should be actively engaging in activities, exploration, and discussion. From designing a zoo to learning to garden to exploring the night sky, you'll find eight STEM lessons that are creative, hands-on, and engaging for elementary learners. Written for teachers and parents, the book unpacks STEM integration across multiple subjects with connections to the ISTE Standards. The book also includes play-based lessons for young learners and ideas for innovative design challenges. Each of the eight lessons includes an overview of materials, resources, time, and supervision needed; suggested resources to explore, such as simulations and virtual field trips; supplementary learning materials, such as questions and quizzes; ideas for games and reinforcement; hands-on activities and engineering design challenges; connections to various content areas, as well as children's books, movies, and art to keep the learning going after the lesson is completed. Concluding with a model for designing online and distance STEM learning for elementary-aged children, this book will support teachers and parents in designing the types of resources and learning experiences they need for elementary students. distance learning Audience: K-5 teachers and parents
