Dillenburg, Patrick A. Hesp, 2008-11-02 This is the first book to cover the Holocene geology and geomorphology of the 9 200 kilometers of the Brazilian coast It is written for third and fourth year undergraduates post graduate students scientists and managers It characterizes the Brazilian coast in terms of the Holocene geology geomorphology oceanographic and climatic conditions and the location morphology and evolution of the barrier types Separate chapters outline the types of barriers and coastal dynamics in each state beginning in the south and proceeding to the north Some emphasis is placed on the stretches of coast where the detailed morphology and stratigraphy of barriers has been previously determined To date the Brazilian coastal barriers have been largely ignored by the international community partly perhaps because much of the past research has tended to concentrate on barrier islands of which there are very few in Brazil In contrast the Brazilian coastal barriers display a much wider range of types than is generally assumed The biggest and most spectacular transgressive dunefield barriers in the world exist in Brazil and dominate the southern and northeastern coasts Many have never been described before This volume provides a wealth of information on Holocene barrier types evolution and dynamics It provides managers ecologists biologists and botanists with much needed information on the geology geomorphology and dynamics of the genesis types functioning and ecosystems of the Holocene barriers extending along the entire Brazilian coast **Adaptable**

Embedded Systems Antonio Carlos Schneider Beck, Carlos Arthur Lang Lisboa, Luigi Carro, 2012-11-27 As embedded

systems become more complex designers face a number of challenges at different levels they need to boost performance while keeping energy consumption as low as possible they need to reuse existent software code and at the same time they need to take advantage of the extra logic available in the chip represented by multiple processors working together This book describes several strategies to achieve such different and interrelated goals by the use of adaptability Coverage includes reconfigurable systems dynamic optimization techniques such as binary translation and trace reuse new memory architectures including homogeneous and heterogeneous multiprocessor systems communication issues and NOCs fault tolerance against fabrication defects and soft errors and finally how one can combine several of these techniques together to achieve higher levels of performance and adaptability The discussion also includes how to employ specialized software to improve this new adaptive system and how this new kind of software must be designed and programmed

Astronomy And Relativistic Astrophysics: New Phenomena And New States Of Matter In The Universe - Proceedings Of The Third Workshop (Iwara07)

Horst Stocker,Cesar Augusto Zen Vasconcellos,Valdir B Bezerra,Marcelo J Reboucas,Walter Greiner,Bardo E J Bodmann,2010-04-15 This book presents scientific research on the central theme of new states of matter and new phenomena in the universe The topics covered range from the big bang through topics including the formation of exotic stars black holes and the plasma of quarks and gluons by heavy ion reactions to the influence of dark matter and dark energy in the evolution of the universe Scientific interest in these themes has been growing together with the development of major projects such as AUGER LHC FERMI Telescope FAIR GSI and GEO LIGO the diversity and scope of research on such themes has been on the rise The content is detailed enough to capture the interest of experts in the field and is useful for future explorations on these fascinating themes

Application of Fishes as Biological Models in Genetic Studies Tony Silveira,Sandra Isabel Morena Abril,Mariana Härter Remiao,Caroline Gomes Lucas,2023-03-30 Although Gregor Mendel is considered the father of genetics he has never taken the credit for his principles on heredity Mendel s treatises though they were part of the collection of the largest European libraries in the 19th century were only rediscovered in 1900 16 years after his death Mendel s revolutionary ideas would have given greater strength to the formulation of Charles Darwin s ideas about common descent and gradual evolution through natural selection presented in 1859 in The Origin of Species However Darwin was not totally ignorant of the possibility of genetic heredity He even described invisible characters emerging in atavistic situations and named his hypothetical particle of heredity as gemmules It is remarkable that the invisible characters and gemmules referred by Darwin are what we now know as genes a term coined in 1909 by Wilhelm Johannsen that was widely accepted During the 1930s and 40s the findings of great proponents of genetics and evolution such as Mendel Darwin Wallace Fisher Haldane Wright Dobzhansky Mayr and several others were brought together to form the neo Darwinian synthesis In addition in the 40s genetics started its molecular revolution which in the late 70s driven by sequencing technology gave rise to the genomics era It took approximately 100 years to formulate the theoretical foundations of genetics to understand how information is transmitted to the next generations Now less than 45 years after the beginning of the genomic era science is fully capable of identifying complete genomes Among animals fishes are one of the most relevant groups in genetic studies Although fish studies were important in applying and corroborating Mendel s findings in the first decades of the 19th century these studies contributed little to the development of classical genetics However fish have been of great importance for the development of molecular genetics Several species such as *Carassius auratus* *Oryzias latipes* and *Danio rerio* among several others of productive interest such as *Salmo salar* *Oreochromis niloticus* and *Cyprinus carpio* have been used around the world as biological models These models can be used for the study of genes and genomes epigenetics and genetic expression Genetic studies using fish in addition to increasing genetic knowledge about the species also serve for a better general understanding of the physiology of metabolic pathways diseases evolution systematics dispersion creation and selection of individuals and lineages Considering this this Research Topic aims to bring together studies that present applications of fish as targets in genetic studies

The Franciscana Dolphin Paulo Cesar Simoes-Lopes,Marta Jussara Cremer,2022-06-24 The Franciscana Dolphin On the Edge of Survival provides the most updated and comprehensive knowledge on the most endangered marine mammal in the Western South Atlantic Ocean It synthesizes all available information on this dolphin species also referred to as La Plata dolphin ranging from taxonomy evolution diet parasites and diseases reproduction and growth to genetic diversity and stock definition distribution abundance behavior as well as the threats and causes behind the
