Chapter 4: The Five Component Model begins, on one end, with Technology. Understanding the components, limitations, and benefits of the various computer technology options available to business is an important step to building robust information systems. Our goal is to give you enough Geek Speak so that you won't look like a deer in the headlights when the IT Department shows up asking what you need for a computer system when you get your first job.

Chapter 5: The middle component of the Five Tier Model is Data. For businesses to truly benefit from the data at their disposal, they must gather and structure the data to answer routine questions that will help the business function. The Relational Database is the tool that most modern businesses rely on to meet this business challenge. Understanding the basic rules of the database "game" will make you more valuable as you will have the means to see opportunities in your daily work to do more and become better if the data you needed were easier to come by.

Chapter 6: The Internet. No two words hold more promise and more doom for businesses today. Eighteen years ago, Bill Gates stated "How you gather, manage, and use information will determine whether you win or lose...The winners will be the ones who develop a world-class digital nervous system so that information can easily flow through their companies for maximum and constant learning." Today, that means the Internet and Cloud Technologies.

Objectives
