This SAE Information Report details some of the equipment and procedures used to measure critical characteristics of automatic transmission fluid ATF used in current automatic transmissions It is intended to assist those concerned with the design of transmission components and with the selection and marketing of automatic transmission fluids for the use in passenger car and light duty truck automatic transmissions The information contained herein will be helpful in understanding the terms related to properties designations and service applications of automatic transmission fluids

Factory-Service Automatic Transmission Fluid Requirements S. R. Sprague,R. L. Woodruff,1963 Factory service automatic transmission fluids possess physical properties and performance features which differ substantially from the minimum Type A Suffix A specification requirements In some cases either the transmission life would be impaired by the use of a minimum Type A Suffix A fluid or desirable performance features would be deteriorated These special factory requirements are discussed including low temperature fluidity frictional properties clutch durability antiwear characteristics elastomer compatibility and oxidative stability The specialty factory fluids present questions concerning make up oil additions and drain and refill practices In spite of these however transmission manufacturers will continue to include the lubricant as an integral part of the total design Thus service station fluids should be carefully chosen to compromise manufacturers conflicting recommendations *Automatic Transmission Fluid - Component Effects on Friction* T.
