edited versIOn of lectures presented at the NATO ADVANCED STUDY INSTITUTE on VIRTUAL NONLINEAR MUL TIBODY SYSTEMS which was held in Prague Czech Republic from 23 June to 3 July 2002 It was organized by the Department of Mechanics Faculty of Mechanical Engineering Czech Technical University in Prague in cooperation with the Institute B of Mechanics University of Stuttgart Germany The ADVANCED STUDY INSTITUTE addressed the state of the art in multibody dynamics placing special emphasis on nonlinear systems virtual reality and control design as required in mechatronics and its corresponding applications Eighty six participants from twenty two countries representing academia industry government and research institutions attended the meeting The high qualification of the participants contributed greatly to the success of the ADVANCED STUDY INSTITUTE in that it promoted the exchange of experience between leading scientists and young scholars and encouraged discussions to generate new ideas and to define directions of research and future developments The full program of the ADVANCED STUDY INSTITUTE included also contributed presentations made by participants where different topics were explored among them Such topics include nonholonomic systems flexible multibody systems contact impact and collision numerical methods of differential algebraical equations simulation approaches virtual modelling mechatronic design control biomechanics space structures and vehicle dynamics These presentations have been reviewed and a selection will be published in this volume and in special issues of the journals Multibody System Dynamics and Mechanics of Structures and Machines

Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro,Ramon Vilanova,2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules Inlater chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems
