A FORTRAN Program for Calculating Three-dimensional, Inviscid, Rotational Flows with Shock Waves in Axial Compressor Blade Rows William T. Thompkins, 1982 **A FORTRAN Program for Calculating Three Dimensional, Inviscid and Rotational Flows with Shock Waves in Axial Compressor Blade Rows: User's Manual** William T. Jr Thompkins, Massachusetts Institute of Technology. Gas Turbine and Plasma Dynamics Laboratory, 1981 A FORTRAN IV computer program has been developed for the calculation of the inviscid transonic supersonic flow field in a fully three dimensional blade passage of an axial compressor rotor or stator Rotors may have dampers part span shrouds MacCormack's explicit time marching method is used to solve the unsteady Euler equations on a finite difference mesh This technique captures shocks and smears them over several grid points Input quantities are blade row geometry operating conditions and thermodynamic quantities Output quantities are three velocity components density and internal energy at each mesh point Other flow quantities are calculated from these variables A short graphics package is included with the code and may be used to display the finite difference grid blade geometry and static pressure contour plots on blade to blade calculation surfaces or blade suction and pressure surfaces Flows in four transonic compressor rotors have been analyzed and compared with exit flow field measurements and intra blade static density measurements obtained with a gas fluorescence technique These comparisons have generally shown that the computed flow fields accurately model the experimentally determined passage shock positions and overall aerodynamic performance The computer code was developed and generally run on a large minicomputer system a Digital Equipment Corporation PDP 11 70 with run times of two to three days The code has also been run on several main frame computers IBM 3033 IBM 360 678 UNIVAC 1110 CDC 7600 and a CRAY 1 Typical run times on an IBM 3033 have been found to be 5 10 hours **Towards Autonomous Robotic Systems** Lyuba Alboul, Dana Damian, Jonathan M. Aitken, 2016-06-24 This book constitutes the refereed proceedings of the 17th Annual Conference on Towards Autonomous Robotics TAROS 2016 held in Sheffield UK in June July 2016 The 23 revised full papers presented together with 15 short papers were carefully reviewed and selected from 56 submissions The overall program covers various aspects of robotics including navigation planning sensing and perception flying and swarm robots ethics humanoid robotics human robot interaction and social robotics *Pervasive Computing Paradigms for Mental Health* Silvia Serino, Aleksandar Matic, Dimitris Giakoumis, Guillaume Lopez, Pietro Cipresso, 2016-04-08 This book constitutes the refereed proceedings of the 5th International Conference on Pervasive Computing Paradigms for Mental Health MindCare 2015 held in Milan Italy in September 2015 The 23 full papers and 6 short papers presented were carefully reviewed and selected from 40 submissions The papers deal with the use of technologies in favor of maintaining and improving mental wellbeing They focus on building new computing paradigms and on addressing a multitude of challenges in mental healthcare for example in psychiatric and psychological domains with emphasis on new technologies such as video and audio technologies and mobile and wearable

Turbomachinery Marco Gambini, Michela Vellini, 2020-09-17 This book presents a selection of preliminary sizing procedures for turbomachinery Applicable to both conventional and non conventional fluids these procedures enable users to optimize the kinematics thermodynamics and geometry of the turbomachinery in the preliminary design phase using geometric correlations and losses models to accurately predict the efficiency of turbomachinery in most cases in excellent agreement with CFD calculations and to consistently analyze all turbomachines axial and radial turbines axial and centrifugal compressors centrifugal pumps The book is intended for bachelor s and master s students in industrial mechanical and energy engineering as well as researchers and professionals in the energy systems and turbomachinery sectors guiding them step by step through the first sizing of turbomachines and the verification of the technological feasibility of turbomachines designed for new conversion systems operating with unconventional fluids **Aerodynamics of Wind Turbines** Sven Schmitz, 2020-01-28 A review of the aerodynamics design and analysis and optimization of wind turbines combined with the author s unique software Aerodynamics of Wind Turbines is a comprehensive introduction to the aerodynamics scaled design and analysis and optimization of horizontal axis wind turbines The author a noted expert on the topic reviews the fundamentals and basic physics of wind turbines operating in the atmospheric boundary layer He then explores more complex models that help in the aerodynamic analysis and design of turbine models The text contains unique chapters on blade element momentum theory airfoil aerodynamics rotational augmentation vortex wake methods actuator line modeling and designing aerodynamically scaled turbines for model scale experiments The author clearly demonstrates how effective analysis and design principles can be used in a wide variety of applications and operating conditions The book integrates the easy to use hands on XTurb design and analysis software that is available on a companion website for facilitating individual analyses and future studies This component enhances the learning experience and helps with a deeper and more complete understanding of the subject matter This important book Covers aerodynamics design and analysis and optimization of wind

turbines Offers the author s XTurb design and analysis software that is available on a companion website for individual analyses and future studies Includes unique chapters on blade element momentum theory airfoil aerodynamics rotational augmentation vortex wake methods actuator line modeling and designing aerodynamically scaled turbines for model scale experiments Demonstrates how design principles can be applied to a variety of applications and operating conditions Written for senior undergraduate and graduate students in wind energy as well as practicing engineers and scientists Aerodynamics of Wind Turbines is an authoritative text that offers a guide to the fundamental principles design and analysis of wind turbines

Marine Propellers and Propulsion John Carlton,2018-11-30 Marine Propellers and Propulsion Fourth Edition offers comprehensive cutting edge coverage to equip marine engineers naval architects or anyone involved in propulsion and hydrodynamics with essential job knowledge Propulsion technology is a complex multidisciplinary topic with design construction operational and research implications Drawing on experience from a long and varied career in consulting research design and technical investigation John Carlton examines hydrodynamic theory materials and mechanical considerations and design operation and performance Connecting essential theory to practical problems in design analysis and operational efficiency the book is an invaluable resource packed with hard won insights detailed specifications and data Features comprehensive coverage of marine propellers fully updated and revised with new chapters on propulsion in ice and high speed propellers Includes enhanced content on full scale trials propeller materials propeller blade vibration operational problems and much more Synthesizes otherwise disparate material on the theory and practice of propulsion technology from the past 40 years development including the latest developments in improving efficiency Written by a leading expert on propeller technology essential for students marine engineers and naval architects involved in propulsion and hydrodynamics
