Green Chemistry in Food Analysis Leo M.L. Nollet, N.C.

Basantia,2025-11-19 In today's world ensuring the safety and quality of food is more critical than ever. At the same time the need to reduce the environmental impact of laboratory practices is becoming a top priority across the scientific community. Green Analytical Chemistry in Food Analysis bridges these two essential goals presenting a comprehensive and forward thinking guide to apply green chemistry principles in the analytical evaluation of food. This book is a response to the growing demand for environmentally responsible techniques in food testing methods that do not sacrifice analytical accuracy, sensitivity or precision. It explores how green analytical chemistry (GAC) can transform every step of the food analysis process from sample collection and preparation to separation, detection and data processing. Through a combination of modern technologies, novel methodologies and sustainable thinking the field is redefining how we approach contaminants, residues and nutritional profiling in food. Key topics include: Green Sample Preparation: Minimizing solvent usage and adopting eco friendly extraction methods. Sustainable Separation and Detection: Innovations in chromatography, spectrometry, titrimetry and gravimetry with reduced chemical and energy footprints. Cleaner Alternatives: Natural indicators, alternative solvents and energy efficient instruments. Miniaturization and Direct Analysis: Reducing waste through compact, high efficiency systems. Advanced Tools: Chemometric and computational approaches to streamline processes and reduce laboratory interventions. Real World Applications: Case studies focusing on pesticide residues, mycotoxins, heavy metals and other critical food contaminants. Scoring Greenness: Calculation of green score using different available metrics with examples. Concepts and Principles: Concepts and principles of GAC explained in simplest manner to understand in first time. Whether you're an analytical chemist, food scientist, environmental researcher or student, this book offers valuable insights into implementing greener methods that meet today's strict regulatory standards while supporting global sustainability goals. Green Analytical Chemistry in Food Analysis is more than a technical resource; it is a call to action for a cleaner, safer and more responsible future in food science.

Enhancing Salinity Tolerance in Crop Plants through Agronomic, Genetic, Molecular, and Physiological Approaches Muhammad Umair Hassan, Muhammad

Nawaz, Lorenzo Barbanti, Sajid Masood, 2025-03-24 Salinity stress is serious abiotic stress that negatively affects crop productivity and global food security. One of the top ten threats to the world's land resources, the extent of soil salinity is increasing by 1.5 million hectares every year. Salinity stress is a global problem that threatens food productivity, food security

and ecosystems Salinity affects seed germination plant growth nutrient and water uptake physiology and molecular responses Increasing industrialization and anthropogenic activities further aggravate salinity stress Global population is continuously rising necessitating a substantial increase in crop production to meet food needs Therefore proper measures must be taken to improve crop productivity on salt affected soils to ensure global food security Recent studies have shown that the negative effects of salinity stress in plants can be countered by various biochemical physiological and molecular mechanisms at both tissue and whole plant levels Progress in metabolomics transcriptomics and proteomics has enabled the identification of various stress induced proteins metabolites and transcription factors that can be used to develop salinity tolerance in plants Moreover advances in genomics and biotechnology allow for the breeding of salt tolerant cultivars with improved production potential in salt affected soils
