Venkateswarlu, N DEVANNA,

Engineering Tribology and Biomedical Materials Sontaya Limmatvapirat, Yunn Lin Hwang, 2021-10-08 Selected peer reviewed full text papers from the 4th PST and 2nd ICETAT *Analytical Techniques in the Pharmaceutical Sciences* Anette Müllertz, Yvonne Perrie, Thomas Rades, 2016-08-30 The aim of this book is to present a range of analytical methods that can be used in formulation design and development and focus on how these systems can be applied to understand formulation components and the dosage form these build To effectively design and exploit drug delivery systems the underlying characteristic of a dosage form must be understood from the characteristics of the individual formulation components to how they act and interact within the formulation and finally to how this formulation responds in different biological environments To achieve this there is a wide range of analytical techniques that can be adopted to understand and elucidate the mechanics

of drug delivery and drug formulation Such methods include e g spectroscopic analysis diffractometric analysis thermal investigations surface analytical techniques particle size analysis rheological techniques methods to characterize drug stability and release and biological analysis in appropriate cell and animal models Whilst each of these methods can encompass a full research area in their own right formulation scientists must be able to effectively apply these methods to the delivery system they are considering The information in this book is designed to support researchers in their ability to fully characterize and analyze a range of delivery systems using an appropriate selection of analytical techniques Due to its consideration of regulatory approval this book will also be suitable for industrial researchers both at early stage up to pre clinical research

Poorly Soluble Drugs Gregory K. Webster, Robert G. Bell, J. Derek Jackson, 2017-01-06 This book is the first text to provide a comprehensive assessment of the application of fundamental principles of dissolution and drug release testing to poorly soluble compounds and formulations Such drug products are vis vis their physical and chemical properties inherently incompatible with aqueous dissolution However dissolution methods are required for product development and selection as well as for the fulfillment of regulatory obligations with respect to biopharmaceutical assessment and product quality understanding The percentage of poorly soluble drugs defined in classes 2 and 4 of the Biopharmaceutics Classification System BCS has significantly increased in the modern pharmaceutical development pipeline This book provides a thorough exposition of general method development strategies for such drugs including instrumentation and media selection the use of compendial and non compendial techniques in product development and phase appropriate approaches to dissolution development Emerging topics in the field of dissolution are also discussed including biorelevant and biphasic dissolution the use on enzymes in dissolution testing dissolution of suspensions and drug release of non oral products Of particular interest to the industrial pharmaceutical professional a brief overview of the formulation and solubilization techniques employed in the development of BCS class 2 and 4 drugs to overcome solubility challenges is provided and is complemented by a collection of chapters that survey the approaches and considerations in developing dissolution methodologies for enabling drug delivery technologies including nanosuspensions lipid based formulations and stabilized amorphous drug formulations

Non-Biological Complex Drugs Daan J.A. Crommelin, Jon S. B. de Vlieger, 2015-06-24. The rise of bio and nano technology in the last decades has led to the emergence of a new and unique type of medicine known as non biological complex drugs (NBCDs). This book illustrates the challenges associated with NBCD development as well as the complexity of assessing the effects of manufacturing changes on innovator and follow on batches of NBCDs. It also touches upon proven marketing authorization requirements for biosimilars that could be effective in evaluating follow on NBCDs including a demonstration of control over the manufacturing process and a need for detailed physico-chemical characterization and pre-clinical tests. This book is meant to be used for years to come as a standard reference work for the development of NBCDs. Moreover, this book aims to stimulate discussions and further our thinking to ensure that decisions regarding the approval of complex drugs are made with relevant scientific data on the table.
