

C. VA Drug Classification System

Introduction

The Department of Veterans Affairs Drug Classification system was developed to provide a systematic management approach to the classification of medications, including investigational and over-the-counter drugs, prosthetic items, and expendable supplies. The system is designed to

- support inpatient and outpatient pharmacy activities;
- facilitate identification of drug-drug, drug-allergy, drug-lab, and drug-food interactions;
- uphold requirements for inventory accountability;
- substantiate and improve all patient medication-related activity;
- provide an improved database to assist the health care provider;
- provide a coordinated method of database communication for VA management;
- facilitate monitoring of investigational drugs; and
- facilitate control of prosthetic and supply items.

Each five-character alpha-numeric code specifies a broad classification and a specific type of product. The first two characters are letters and form the mnemonic for the major classification (e.g., AM for antimicrobials). Characters 3 through 5 are numbers and form the basis for subclassification. For example, the classification system for the penicillins is as follows.

AM000 ANTIMICROBIALS

AM050 Penicillins

- AM051 Penicillin-G Related Penicillins
- AM052 Penicillins, Amino Derivatives
- AM053 Penicillinase-Resistant Penicillins
- AM054 Extended Spectrum Penicillins

Descriptive comments are included only when the classification system itself is not self-explanatory. The VA Drug Classification system classifies drug products, not generic ingredients. Drug products with local effects are classified by route of administration (e.g., dermatological, ophthalmic). If a product is not classified by route of administration, it is classified in most instances under a specific chemical or pharmacological classification (e.g., beta-blockers, cephalosporins). If a product is not classified by route of administration, or chemical or pharmacological subclassification, it may be classified under a therapeutic category (e.g., antileptic agents, antiparkinson agents).

Most combination products are found in the "other" subclassification under each major classification unless a specific subcategory for combination products exists or a descriptive comment indicates inclusion elsewhere. In addition, products which are not adequately described
