The Weight of the Vacuum Helge S. Kragh, James M. Overduin, 2014-05-21 The 2011 Nobel Prize in Physics was awarded for the discovery of cosmic acceleration due to dark energy a discovery that is all the more perplexing as nobody knows what dark energy actually is We put the modern concept of cosmological vacuum energy into historical context and show how it grew out of disparate roots in quantum mechanics zero point energy and relativity theory the cosmological constant Einstein's greatest blunder These two influences have remained strangely aloof and still co exist in an uneasy alliance that is at the heart of the greatest crisis in theoretical physics the cosmological constant problem *Ultrahigh-Speed Optical Transmission Technology* Hans-Georg Weber, Masataka Nakazawa, 2007-12-28 Ultrahigh speed optical transmission technology is a key technology for increasing the communication capacity In optical fibre networks the number of wavelength channels and the bit rate per wavelength channel i e the TDM Time Division Multiplexing bit rate determine the transmission capacity Currently TDM bit rates of more than 40 Gbit s require optical signal processing Optical Time Division Multiplexing OTDM OTDM bit rates of up to 1.2 Tbit s have already been reported The devices developed for ultrahigh speed optical transmission are not limited to communication applications only They are key devices for high speed optical signal processing i e monitoring measurement and control and will thus give a wide technological basis for innovative science and technology All these aspects of ultrahigh speed optical transmission technology are described in detail in this book *Organic Compounds of Sulphur, Selenium, and Tellurium* D R Hogg, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *Cumulated Index Medicus*, 1997 **Massive WDM and TDM Soliton Transmission Systems** Akira Hasegawa, 2006-04-11 This book summarizes the proceedings of the invited talks presented at the International Symposium on Massive TDM and WDM Optical Soliton Transmission Systems held in Kyoto during November 9-12 1999 The symposium is the third of the series organized by Research Group for Optical Soliton Communications ROSC

chaired by Akira Hasegawa The research group ROSC was established in Japan in April 1995 with a support of the Japanese Ministry of Post and Telecommunications to promote collaboration and information change among communication service companies communication industries and academic circles in the theory and application of optical solitons The symposium attracted enthusiastic response from worldwide researchers in the field of soliton based communications and intensive discussions were made In the symposium held in 1997 new concept of soliton transmission based on dispersion management of optical fibers were presented This new soliton is now called the dispersion managed soliton The present symposium mainly focuses the theoretical and experimental developments of dispersion managed solitons It is remarkable that the concept of the dispersion managed soliton which was just born two years ago when the naming was not even given yet has become the center of soliton research in two years The dispersion managed soliton has an enhanced power in maintaining reasonable signal to noise ratio yet has reduced Gordon Haus timing jitter by reduced averagedispersion The dispersion managed soliton also has demonstrated its power in soliton based WDM transmissions

Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Genomes and Evolution of Charophytes, Bryophytes, Lycophytes and Ferns, 2016-03-23 Advances in Botanical Research publishes in depth and up to date reviews on a wide range of topics in plant sciences. The series features several reviews by recognized experts on all aspects of plant genetics biochemistry cell biology molecular biology physiology and ecology. Volume 78 focuses on the Genomes and Evolution of Charophytes Bryophytes Lycophytes and Ferns. Sequencing of genomes of lower animals such as sponges or hydrozoans has much informed our understanding of how metazoans evolved. On the plant side of things sequencing and comparison of a moss and lycophyte genome with those of green algae and flowering plants has greatly informed our understanding of plant evolution. However it has also become clear that we need to look into genomes of the closest algal relatives to land plants the charophytes and into further genomes of bryophytes lycophytes and ferns to unravel how land plants evolved. Features reviews by recognized experts on all aspects of plant genetics biochemistry cell biology molecular biology physiology and ecology. Focuses on the genomes and evolution of charophytes bryophytes lycophytes and ferns. Offers a first time compilation on non flowering plant genomes. Helps unravel how land plants evolved.
