mechanism utilizes vacuum interrupters to break the current when changing tap positions. Since all arcing takes place within a vacuum chamber, oil contamination is eliminated and the arcing contact life is prolonged.

Control of the motor drive equipment may be either manual or automatic/manual, depending on the requirements of the installation, and can be located at

the transformer and/or on a remote panel. When equipped with automatic controls a relatively constant voltage can be maintained automatically at some predetermined load center as the transformer input voltage fluctuates and as load conditions vary.

In the following text, numbers in parentheses refer to items in the various figures and symbols in *italics* refer to

These instructions do not purport to cover all details or variations in equipment nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the General Electric Company.
