

Birth

Whales' experiences start with birth, where calves are born with the help of midwives in some species.

Infancy

The infancy stage is characterized by rapid growth and soon the mother's milk.

Juvenile

During the juvenile phase, whales learn essential survival skills such as hunting and social interactions.

Maturity

Maturity is reached when whales can reproduce, marking their entry into adulthood.

Breeding

The breeding stage involves complex mating rituals, with some species forming lifelong bonds or seasonal partnerships.

Did I Ever Tell You about the Whale? William L. Nolte, 2008-11-01 Foreword by James W Bilbro Technology maturity

What is it and why is it important For more than ten years the Government Accountability Office GAO has criticized federal agencies for a history of cost and schedule overruns on a significant portion of their procurement programs GAO has repeatedly reported that the use of immature technologies in programs is a primary cause for these overruns In spite of these repeated reports the problems in government procurement have not improved In fact recent reports indicate that the problems are getting worse One cause of this worsening situation might be that while GAO identified lack of technology maturity as a problem they did not tell how to measure technology maturity or conversely its lack This groundbreaking work attempts to fill this gap by examining the current state of technology maturity measurement pointing out strengths and weaknesses of available measures and proposing a complete technology maturity assessment as a potential solution The book also includes a discussion of risk during technology development

The Sounding of the Whale D. Graham Burnett, 2022-12-22 This wonderful book documents the interplays among science conservation and politics in the evolving career of the whale over the last century William Perrin Senior Scientist for Marine Mammals at the Southwest Fisheries Science Center NOAA Fisheries Service From biblical times whales have breached in the human imagination as looming figures of terror power confusion and mystery In the twentieth century however our understanding of and relationship to these superlatives of creation underwent some astonishing changes and with *The Sounding of the Whale* D. Graham Burnett tells the fascinating story of the transformation of cetaceans from grotesque monsters useful only as wallowing kegs of fat and fertilizer to playful friends of humanity bellwethers of environmental devastation and finally totems of the counterculture in the Age of Aquarius When Burnett opens his story ignorance reigns even Nature was misclassifying whales at the turn of the century and the only biological study of the species was happening in gruesome Arctic slaughterhouses But in the aftermath of World War I an international effort to bring rational regulations to the whaling industry led to an explosion of global research and regulations that while well meaning were quashed or widely flouted by whaling nations the first shot in a battle that continues to this day The book closes with a look at the remarkable shift in public attitudes toward whales that began in the 1960s as environmental concerns and new discoveries about whale behavior combined to make whales an object of sentimental concern and public adulation A sweeping history grounded in nearly a decade of research *The Sounding of the Whale* tells a remarkable story of how science politics and simple human wonder intertwined to transform the way we see these behemoths from below

Applied Mathematical Demography Nathan Keyfitz, Hal Caswell, 2005-11-14 Focuses on applications of demographic models This book introduces the life table to describe age specific mortality and uses it to develop theory for stable populations and the rate of population increase This theory is then revisited in the context of matrix models for stage classified as well as age classified populations

A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic
