

Physics ATP Notes

To produce more accurate results

- Repeat experiment, to calculate average reading.
- Avoid parallax error, look perpendicular to the ruler.
- If accuracy in measurement was asked, check for zero error.

1. Spring Experiments

Variables to be kept constant

- Same spring diameter.
- Same spring thickness.
- Same range of loads.
- Same length of spring/hanger
- Same number of coils
- Same coil spacing.

Precaution for spring experiments

- Wait for the spring to stop moving and then record the length.
- Look perpendicular to the scale of the ruler while taking the readings to avoid parallax error.
- Always measure from the same point of spring.
- Ensure the ruler is vertical/use horizontal aid.
- Bench surface must be horizontal.
- At least 5 loads for each spring if producing a graph.
- Clamping the meter ruler in place and then using the set square to make the length/extension measurement.
- Use the set square to make sure that the clamped ruler is vertical in relation to the bench.
- Set the clamped ruler at 0 cm when no masses are added and, so read the extension directly.

Difficulties to overcome

- The clamp retort stand might topple.
 - To overcome: use small loads.
- Spring might overstretch/spring is too weak.
 - To overcome: use loads that don't overstretch spring.

Possible causes for inaccuracy

- Spring extension is not uniform with load.
- Spring exceeds the limit of proportionality.
