

5 Installation Guidelines

5.1 Important Installation Guidelines

- Westell Signal Boosters are designed for outdoor usage with a weather proof outdoor NEMA4 cabinet that can be mounted without any kind of shelter from rain, snow or hail.
- The Signal Booster must be installed in a vertical orientation (i.e. Connectors on the bottom of the unit).
- Inadequate isolation between the outside and inside antennas may cause regenerative feedback in the system.
 - This feedback can cause the amplifier to emit a continuous signal at maximum Amplitude, and, in some cases, interfere with normal operation of the donor site. Careful consideration of the layout and placement of the system is imperative to minimize this possibility and to minimize the amount of signal leaking from the Building.
- Do not disassemble the Signal Booster.

Danger!

- Refer to the 1.3 Safety Guidelines section for proper antenna selection and installation. To avoid serious injury, death and/or damage to the Signal Booster, do not install donor or server antennas near overhead power lines or high power components. Allow enough distance so that falling antennas would not come in contact with those components.
- Electric shock may occur if the Signal Booster is installed in close proximity to water.

WARNING!

- Amplifier or handset damage may occur if a handset is connected directly to the Signal Booster or to the coax that leads to the Signal Booster.
- The Signal Booster must be connected to ground for protection.
- We recommend that installers do not wear jewelry or metal accessories when installing this Signal Booster.
- Do not place cables or tools that may damage the Signal Booster in close proximity to it.
- Check the installation site for hazardous conditions such as water-covered floors or badly worn or damaged cables prior to installation.
- Lifespan and performance of the Signal Booster may be reduced if the unit is operating outside its nominal temperature range.
- However, to improve reliability, it is recommended to mount the Signal Booster on a site with shelter from direct exposure to sun, rain, snow and hailing.
- It is not recommended to install the Signal Booster under bad weather conditions, such as:
 - Intense rainfall, snowfall or hail
 - Storm or high wind
 - Extremely low or high temperature
 - High humidity of the air
