Vallero,2014-07-26 Fundamentals of Air Pollution is an important and widely used textbook in the environmental science and engineering community This thoroughly revised fifth edition of Fundamentals of Air Pollution has been updated throughout and remains the most complete text available offering a stronger systems perspective and more coverage of international issues relating to air pollution Sections on pollution control have been reorganized and updated to demonstrate the move from regulation and control approaches to green and

sustainable engineering approaches The fifth edition maintains a strong interdisciplinary approach to the study of air pollution covering such topics as chemistry physics meteorology engineering toxicology policy and regulation New material includes near road air pollution new risk assessment approaches indoor air quality the impact of biofuels and fuel additives mercury emissions forecasting techniques and the most recent results from the National Air Toxics Assessment Stronger systems approach emphasizing the impact of air pollution on ecosystems and human health Risks measures models and control of air pollution are discussed at scale starting at the individual niche level and expanding to planetary global scale Increased emphasis on international issues including coverage of European initiatives and discussions of the impact of emerging economies like India and China Updated references standards and methods throughout the book make this the most current air pollution text reference on the market All new end of chapter problems enhance its usefulness as a course text

Introduction to Environmental Management Mary K. Theodore, Louis Theodore, 2009-10-08 It is hard to imagine an area of study or a discipline in which a basic knowledge of the issues would not be beneficial since environmental concerns are very much in the public consciousness Written at a level that is accessible to students in all disciplines

Introduction to Environmental Management translates complex environmental issues into **Thermodynamic Interactions** Javier Garcia-German, 2017-07-01 An Exploration into Material Physiological and Territorial Atmospheres Energy and sustainability is a complex topic that needs to address simultaneously core disciplinary values and ideas that come from other fields of knowledge The interconnection between the environment and its climate its built structures and the human body requires overlying architecture with other disciplines such as meteorology thermodynamics or physiology to engage them in a holistic way The book is structured in three blocks Territorial Atmospheres Material Atmospheres and Physiological Atmospheres which present three distinct and successive realms at which thermodynamic exchanges are taking place Territorial Atmospheres deals with the thermodynamic interaction between the environment and its built structures Material Atmospheres focuses on the interaction between a building and the climate it generates And lastly Physiological Atmospheres centers on the interaction between indoor ambient and the physiological and psychological effects on human beings Each of the blocks has a coeditor Silvia Benedito for Territorial Atmospheres Iaki Balos for Material Atmospheres and Philippe Rahm for Physiological Atmospheres who will work together with the editor defining the context of the book
