Glimpses into Primary School Teacher Education in South Africa Sarah Gravett, Elizabeth Henning, 2020-11-05

This book explores the current landscape of Initial Teacher Education ITE in primary schools in South Africa. Considering recent policy directives and initiatives, it highlights the dilemmas of ITE for the primary school and gives a thorough account of innovations and initiatives to improve ITE. The book presents what works best for quality preparation of teachers in the Global South where many children rely on their teachers and school life to break the cycle of poverty. Chapters draw on evidence from workplace learning, pre-service study, and primary school teacher education policy to highlight examples of promising change in teacher education in South Africa, addressing the clichés of theory versus practice head-on. This book successfully brings out the challenging aspects of teacher education for childhood learning, which has otherwise been regarded as the softer option for a career in education. This book will be of great interest for academics, researchers, and post-graduate students in the fields of teacher education, African education, educational policy, international education, and comparative education.

Routledge Handbook of Arts and Global Development Vicki-Ann Ware, Kirsten

Sadeghi-Yekta, Tim Prentki, Wasim al Kurdi, Patrick Kabanda, 2024-08-29. This book brings together a leading team of international experts in arts and global development to showcase effective practice and to explore how this vibrant interdisciplinary field has developed and what the latest research can teach us. Although arts play a central role in human development and in the health and wellbeing of individuals and communities, few have attempted to comprehensively explore arts practice as global development. This Handbook first provides a theoretical framework for exploring arts and global development, before surveying a comprehensive range of art forms and development practices to explore the potential of the arts to strategically and beneficially contribute to more just and equitable conditions for communities across the globe. Stretching across the arts from theatre, dance, and music to poetry, film, and visual arts, the book covers topics as diverse as health, education, peacebuilding, livelihoods, sustainability, activism, and arts as research method in programming. The Handbook also identifies gaps in the literature, pointing towards the most pressing and promising avenues for further research over the next few years. This book will be an essential resource for any researcher, student, or practitioner wishing to understand the role of the arts in global development and in the global south more generally.

The Urban Ecologies of Divided Cities Amira Osman,John Nagle,Sabyasachi Tripathi,2023-06-12 The book discusses how division affect the fabric of cities and people s sense of identity and agency and are reflected in physical features architecture and urban planning The question of divided cities represents a complex and multistranded urban Ecology at once both social and spatial it cannot be limited to a single science or discipline such as social or spatial fields This suggests integrated and cross disciplinary understandings as well as integrated or parallel approaches and solutions Urban ecologies of division manifest in multiple forms One of their most

palpable expressions is conflict with parallels around the world and often with correlations in the spatial fabric Violence in such contexts is often a surface expression of deeper socio economic or ideological differences Whether as a result of intervention by authority or by dissent between groups a divided city inevitably becomes a place of conflict in various forms and intensity eroding the joy of living and sense of collective belonging to the detriment of all In effect it erodes the collective advantage of being part of a more unified society A city exists in collections of social structures which mutually form a society A divided city implies divided social structures and in consequence a divided society The papers compiled in this book present many case studies of divided cities discussing the different causes of divisions and their effects on societies Some of the causes can be linked to conflicts wars colonialism or legislative political systems In response to the serious challenges resulting from these divisions the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions making it significant to urban planners architects and policymakers *Directory of MFA*
