Genetic and Epigenetic Control on Immune Responses Regulating Molecules in Cancer Development, Progression, and Treatment Katherine Chiappinelli,Alejandro Villagra ,Lidia Karabon,2024-10-16 In line with recent evidence the development of cancer has been described as uncontrolled cell growth that results from gradual accumulation of genetic and epigenetic alterations involving aberrations in oncogenes tumor suppressor genes and defects in genes engaged in DNA repair As a result cancer cells acquire a neoplastic phenotype and tumor associated antigens TAAs are presented on their surface These target structures should be recognized by cells of the immune system However a sequence of events at the genetic and epigenetic level disturb immune cells and in consequence make them unable to eliminate cancer cells Both innate and adaptive immunity are mobilized against cancer cells In response to the appearance of cells with malignant transformation NK cells release perforin and granzyme causing direct cytolysis of the target cells They can also secrete pro inflammatory cytokines and in that way enhance the anticancer response The activity of NK cells is regulated by a variety of activating and inhibitory receptors including NKG2D KIR CD94 NKG2 heterodimers and natural cytotoxicity receptors TNF family ligands as well as co stimulatory receptors which recognize related molecules on target cells A fundamental trigger of the anticancer immune response is the recognition of TAAs by T cells via the major histocompatibility complex MHC which should be followed by signals from co stimulatory molecules Full activation of T lymphocytes requires a third signal provided by the presence of cytokines and this leads to cell proliferation differentiation and secretion of chemokines and cytokines The effect is to drive the clonal expansion of the T cells directed against TAAs and to recruit other immune effector cells in order to enhance immune defense

**Telomere Territory and Cancer** Parvin Mehdipour,2012-08-13 Timing racing combating struggling and targeting are some actions through which cellular fate could be reflected and evaluated Interaction between cell territory and environment occur during pre embryonic fetal development and post natal periods What the researchers

observe as the outcome of telomeres behavior is only the peak of an ice mountain within a stormy ocean Cellular life depends on programmed behavior of telomeres capable to surprise the cells Telomeres provide an introduction to the history of our cells which govern the quality of life and status of health Telomeres as the cooperative territory are capable of stabilizing the chromosomal territory The status of telomeres reflects the key information announcing the real age of individuals and may be a valuable marker for prognosis and predicting cancer Telomere territory is characterized with a multi disciplinary manner Therefore this book is aimed to offer a wide range of chapters hoping to be useful for diverse audiences including hematologists oncologists radiotherapists surgeons cancer researchers and all the sectors who affect the macro and micro environmental domains Finally telomeres are sensitive cooperative and trustable targets It is worth to state that telomeres are messengers of NATURE let s to know them as they are

**Telomeres and Telomerase in Aging, Disease, and Cancer** K. Lenhard Rudolph,2007-11-07 Telomere shortening represents one of the basic aspects of ageing and telomere dysfunction could contribute to the accumulation of DNA damage during ageing This book summarizes evidence and data indicating that telomere dysfunction influences human ageing diseases and cancer The book describes our current knowledge on checkpoints that limit cellular lifespan and survival in response to telomere dysfunction There is special focus on adult stem cells

**Biochemistry** David E. Metzler,Carol M. Metzler,2001 Biochemistry The Chemical Reactions of Living Cells is a well integrated up to date reference for basic chemistry and underlying biological phenomena Biochemistry is a comprehensive account of the chemical basis of life describing the amazingly complex structures of the compounds that make up cells the forces that hold them together and the chemical reactions that allow for recognition signaling and movement This book contains information on the human body its genome and the action of muscles eyes and the brain Thousands of literature references provide introduction to current research as well as historical background Contains twice the number of chapters of the first edition Each chapter contains boxes of information on topics of general interest

*The Telomerase Revolution* Michael Fossel,2015-10-06 One of Wall Street Journal s Best Books for Science Lovers in 2015 Science is on the cusp of a revolutionary breakthrough We now understand more about aging and how to prevent and reverse it than ever before In recent years our understanding of the nature of aging has grown exponentially and dramatic life extension even age reversal has moved from science fiction to real possibility Dr Michael Fossel has been in the forefront of aging research for decades and is the author of the definitive textbook on human aging In *The Telomerase Revolution* he takes us on a detailed but highly accessible scientific journey providing startling insights into the nature of human aging Twenty years ago there was still considerable debate of the nature of human aging with a variety of competing theories in play But scientific consensus is forming around the telomere theory of aging The essence of this theory is that human aging is the result of cellular aging Every time a cell reproduces its telomeres the tips of the chromosomes shorten With every shortening of the telomeres the cell s ability to repair its molecules decreases It ages Human aging is the result of the aging

of the body's trillions of cells. But some of our cells don't age. Sex cells and stem cells can reproduce indefinitely without aging because they create telomerase. Telomerase re-lengthens the telomeres, keeping these cells young. The Telomerase Revolution describes how telomerase will soon be used as a powerful therapeutic tool with the potential to dramatically extend life spans and even reverse human aging. Telomerase-based treatments are already available and have shown early promise, but much more potent treatments will become available over the next decade. The Telomerase Revolution is the definitive work on the latest science on human aging, covering both the theory and the clinical implications. It takes the reader to the forefront of the upcoming revolution in human medicine. *Biochemistry (2 Volume Set)* David E.

Metzler, 2003-04-04 *Biochemistry: The Chemical Reactions of Living Cells* is a well-integrated, up-to-date reference for basic biochemistry, associated chemistry, and underlying biological phenomena. *Biochemistry* is a comprehensive account of the chemical basis of life, describing the amazingly complex structures of the compounds that make up cells, the forces that hold them together, and the chemical reactions that allow for recognition, signaling, and movement. This book contains information on the human body, its genome, and the action of muscles, eyes, and the brain. Thousands of literature references provide introduction to current research as well as historical background. Contains twice the number of chapters of the first edition. Each chapter contains boxes of information on topics of general interest. *Study Guide and Solutions Manual* Bruce A. Chase, Peter J. Russell, 2005-06 This student resource contains chapter outlines of text material, solutions to all end-of-chapter problems, key terms, suggestions for analytical approaches, problem-solving strategies, and a variety of additional questions for student practice. Also featured are questions that relate to chapter-specific animations and iActivities. **Reviews on**

**Selected Topics of Telomere Biology** Bibo Li, 2012-11-14 Telomeres, located at the ends of linear chromosomes, are essential for genome stability and integrity. Advances in telomere researches have linked telomere dysfunction with cellular aging and a number of age-related human diseases. Recent studies further expanded our knowledge of telomere functions: telomeres are shown to be important for microbial pathogen virulence, and telomere proteins have important non-telomeric cellular functions. This book includes current opinions on selected aspects of telomere research and their implication in hope to help us focus better on future studies and enhance our research progress. Telomeres, Diet and Human Disease Amelia Marti, Guillermo Zalba, 2017-08-30 The maintenance of telomeres (repetitive sequences at the end of chromosome) is essential to health. Dysfunction in telomere maintenance pathways plays a role in aging, cancer, atherosclerosis, and other diseases. This has led to telomere maintenance as a prime target for patient therapies. This book describes the advances in telomere research as it applies to human health and especially how lifestyle and dietary factors could modify the telomerase maintenance process. The book examines the mechanisms involved, the primary of which are oxidative stress and the role of sirtuins, and how they can be modified by dietary patterns such as Mediterranean diet. *Telomeres and Telomerase in Cancer* Keiko Hiyama, 2009-03-18 Telomerase, an enzyme that maintains telomeres and endows eukaryotic cells with

immortality was first discovered in tetrahymena in 1985 In 1990s it was proven that this enzyme also plays a key role in the infinite proliferation of human cancer cells Now telomere and telomerase are widely accepted as important factors involved in cancer biology and as promising diagnostic tools and therapeutic targets Recently role of telomerase in cancer stem cells has become another attractive story Until now there are several good books on telomere and telomerase focusing on biology in ciliates yeasts and mouse or basic sciences in human providing basic scientists or students with updated knowledge
