Maximizing Value Recovery from Mountain Pine Beetle-killed Pine for Veneer Products
 Brad Wang, Forintek Canada Corp, Pacific Forestry Centre, Mountain Pine Beetle Initiative (Canada), 2005 Lodgepole pine has traditionally been used in British Columbia to make plywood and structural lumber In recent years a large outbreak of mountain pine beetle MPB has resulted in an increased percentage of dry stained logs entering wood product manufacturing facilities Dry wood can be thawed more easily in winter and dried faster than normal wood presenting an opportunity to reduce costs by using different log conditioning veneer peeling and drying parameters The purpose of this study is to determine if it makes economic sense to sort process MPB affected logs separately from normal logs Results are presented discussed from laboratory tests pilot plant trials mill trials conducted to quantify the impact of using MPB logs in veneer manufacture and to determine the optimum manufacturing strategies for conditioning peeling drying to recover maximum veneer value from this resource The results for MPB logs are compared to those for control logs unaffected by MPB and potential economic savings resulting from the use of MPB logs are estimated
