The Oxford Handbook of Event Structure Robert Truswell, 2019-03-26

This handbook deals with research into the nature of events and how we use language to describe events. The study of event structure over the past 60 years has been one of the most successful areas of lexical semantics, uniting insights from morphology and syntax, lexical and compositional semantics, cognitive science, and artificial intelligence to develop insightful theories of events and event descriptions. This volume provides accessible introductions to major topics and ongoing debates in event structure research, exploring what events are, how we perceive them, how we reason with them, and the role they play in the organization of grammar and discourse. The chapters are divided into four parts; the first covers

metaphysical issues related to events the second is concerned with the relationship between event structure and grammar the third is a series of crosslinguistic case studies and the fourth deals with links to cognitive science and artificial intelligence more broadly The book is strongly interdisciplinary in nature with insights from linguistics philosophy psychology cognitive science and computer science and will appeal to a wide range of researchers and students from advanced undergraduate level upwards

Complementary Study of Lexicalist Approaches and Constructionist Approaches Qilong Cheng, Qianwen Cheng, 2023-06-02

This book presents a complementary study of lexicalist approaches and constructionist approaches in linguistics Specific topics discussed include different versions of semantic roles predicate decomposition event structures argument realizations and cognitive construction grammars For decades the relationship between certain concepts and constructions along with related issues of verb construction associations have been perennially taxing for both lexicalist and constructionist approaches alike Indeed in Chinese unmatched verb construction associations and the much richer alternate realizations pose very difficult problems Based on a comparative study the authors make an attempt to account for the possible correspondence between the delicacy of argument setting and the principles of their realization They also account for the integration of construction with verbs in terms of their coherent conceptual content The resultant newly developed model throws new light on these thorny Chinese problems The book will appeal to scholars and students studying cognitive linguistics cognitive semantics computational linguistics and also natural language processing The book also brings up some new analysis of Chinese data for both researchers and learners of Modern Chinese
