Split Decisions Janet Halley, 2008-04-01 Is it time to take a break from feminism In this pathbreaking book Janet Halley reassesses the place of feminism in the law and politics of sexuality She argues that sexuality involves deeply contested and clashing realities and interests and that feminism helps us understand only some of them To see crucial dimensions of sexuality that feminism does not reveal the interests of gays and lesbians to be sure but also those of men and of constituencies and values beyond the realm of sex and gender we might need to take a break from feminism Halley also invites feminism to abandon its uncritical relationship to its own power Feminists are in many areas of social and political life partners in governance To govern responsibly even on behalf of women Halley urges feminists should try taking a break from their own presuppositions Halley offers a genealogy of various feminisms and of gay queer and trans theories as they split from each other in the United States during the 1980s and 1990s All these incommensurate theories she argues enrich thinking on the left not despite their break from each other but because of it She concludes by examining legal cases to show how taking a break from feminism can change your very perceptions of what is at stake in a decision and liberate you to decide it anew

*Power Sharing in a Divided Nation* Johan Saravanamuttu,2017-03-09 This book argues that Malaysia s electoral politics have historically been premised on a hybridized model of communalism and consociationalism Beyond this it posits a newer idea of power sharing based on the dynamic and transformative practice of mediated communalism through six decades 1952 2016 of electoral politics The strategy of mediating communalism is critically explored throughout the book serving to test its

saliency as a distinct approach to power sharing in a social formation which is ethnically religiously and regionally divided yet has remained remarkably and tenuously integrated throughout Malaysia's electoral history The book delves into this question by narrating and theorizing the complexity of communal politics leading to the emergence of new politics which have attempted to put Malaysia on the track of further democratization It is further implied that new politics has to work in tandem with mediated communalism to transcend the most deleterious effects of an ethnically divided society     **Applied Mechanics Reviews** ,1986     Intelligent System and Computing Yang Yi,2020-04-29 The book Intelligent System and Computing reports the theory mathematical models algorithms design methods and applications of intelligent systems and computing It covers various disciplines including computer and information science electrical and computer engineering natural sciences economics and neuroscience The broad ranging discussion covers the key disciplines in computational science and artificial intelligence as well as advances in neuromorphic computing deep learning the Internet of Things computer vision and many others This volume provides both academics and professionals with a comprehensive overview of the field and presents areas for future research     The Cambridge Handbook of Competition Law Sanctions Tihamer Tóth,2022-06-23 This handbook brings together an international roster of competition law scholars and practitioners to address the issue of sanctions in competition law from all angles Covering nineteen jurisdictions around the world the book analyzes the theoretical foundations and practice of sanctioning competition law infringements and most importantly cartels Contributors include a range of experts drawing on criminal law company law labor law human rights and law and economics to determine what sanctions are available as a matter of positive law against corporations and individuals including fines and other criminal administrative and civil law sanctions whether law enforcers are using these sanctions effectively and if new sanctions including individual sanctions should be introduced     *Differential Equations - Theory, Modeling, Data Assimilation and Algorithms* Don Kulasiri,2025-10-01 Rooted in years of interdisciplinary research and collaboration the chapters in this book highlight the central role of differential equations in describing how systems evolve across science and engineering while emphasizing the modern need to connect theory with data and computation It bridges rigorous mathematical foundations with the practical challenges of modeling and inference demonstrating how data assimilation refines models using observations and how advanced numerical algorithms enable the study of complex systems beyond analytical reach By addressing the interplay between models data and computation the book equips advanced students researchers and practitioners with the understanding and tools needed to apply differential equations meaningfully in contemporary scientific inquiry
