Cover **The Learning and Teaching of Number** Rina Zazkis, John Mason, Igor' Kontorovich, 2021-05-23 Numbers are the backbones of mathematics From 1 to infinity numbers accompany and underlie the learning of mathematics and research While perceived as familiar and understood numbers present fascinating and often mysterious patterns relationships and pedagogical issues The Learning and Teaching of Number explores how mathematics education research has addressed issues related to the structure of numbers and number operations and provides a classroom context It invites readers to explore less travelled paths through a well trodden terrain of number This fascinating book combines mathematical content with pedagogical ideas and research results Focusing on number the book illustrates central ideas related to numbers via a variety of tasks at different levels of complexity The Learning and Teaching of Number will allow the reader to examine and develop personal understanding of number sets and the relationships among them enhance personal understanding of familiar topics associated with number operations engage in a variety of tasks and strengthen personal problem solving skills enrich their repertoire of mathematical tasks and pedagogical actions and consider research ideas and results related to teaching numbers number operations and number relationships This is a valuable resource for teacher education courses

graduate programs in mathematics education and professional development programs Teacher trainers and maths teachers will find their personal understanding of numbers and relationships enriched and will draw connections between research and classroom pedagogy which will extend and enhance their teaching Resources in Education ,2001-04 **The Arithmetic Teacher** ,1993 *STEM Teachers and Teaching in the Digital Era* Yifat Ben-David Kolikant,Dragana Martinovic,Marina Milner-Bolotin,2020-02-20 This book brings together researchers from Israel and Canada to discuss the challenges today s teachers and teacher educators face in their practice There is a growing expectation that the 21st century STEM teachers re examine their teaching philosophies and adjust their practices to reflect the increasing role of digital technologies This expectation presents a significant challenge to teachers who are often asked to implement novel technology rich pedagogies they did not have a chance to experience as students or become comfortable with To exacerbate this challenge the 21st century teachers function not only in a frequently changing educational reality manifested by continuous reforms but are also bombarded by often contradictory and competing demands from the legislators administrators parents and students How do we break the vicious circle of reforms and support STEM teachers in making a real change in student learning This book is unique for at least three reasons First it showcases research situated in Israel and Canada that examines the challenges today s teachers and teacher educators face in their practice While the governments of both countries emphasize STEM education their approaches are different and thus provide for interesting comparisons Second in addition to including research based chapters prominent scholars discuss the contributions in each of the book sections problematizing the issues from a global perspective Third technology has a potential to empower teachers in this era of change and this book provides the unique insights from each country while allowing for comparisons discussing solutions and asking new questions This book will be of interest to all involved in STEM teacher education programs or graduate programs in education as well as to educational administrators interested in implementing technology in their schools **Zoo-A-Logical Math** Thomas Kearney,2012-04 The work for this book began with a course I created and taught called Animal Behavior I always knew that there was a strong magnetic bond between people and animals but it wasn t until I began working on my curriculum that I truly found out how strong this bond really was Millions of people young and old will visit zoos and aquariums each year People stand in front of the animals hypnotized by the every movement of the animal People seemed to be looking not just at the animal but almost as if they were looking inside these animals wondering and questioning about the lives of some of our most distant animal relatives In my classroom I found the exact same kinds of responses The discussions and questions of my students motivated me to share with you the lives and abilities of some of the most amazing living creatures in the world People realize that humans are also animals but the belief that we have superior intelligence and problem solving abilities makes us think we are far superior to all of the rest of our Animal World As I began to learn more and lead my student discussions I soon realized that maybe our intelligence was the only thing that we really

did have in our superiority over the rest of our animal relatives I began to look into the idea of comparing humans to animals in a wide variety of behaviors and activities and soon a brand new window into the REAL world of animals began to open up I soon realized that even the most insignificant animals in our world were really superstars when compared to humans By using math we are able to truly get a comparison of animals and how they relate to our own human abilities As I began to create the problems and do the math it became very evident that I began to get the responses that I had hoped for I soon began to call these responses the Wow factor A number of times the teachers that have worked on the problems would actually go back and do the problems a second time because there has to be a mistake or no way that this can be true There were no mistakes and the math did not lie The math allowed us to look at the animals in a totally different way I hope that you too will be amazed and wowed by some of these amazing animals that we share our world with

Topics in Mathematics For Elementary Teachers Sergei Abramovich,2024-01-01 This is the second revised edition of the book published in 2010 under the same title It reflects the author s experience teaching a graduate level mathematics content course for elementary teacher candidates at SUNY Potsdam since 2003 The book addresses a number of recommendations of the Conference Board of the Mathematical Sciences for the preparation of teachers demonstrating how abstract mathematical concepts can be motivated by concrete activities and the use of technology Such approach to school mathematics makes it easier for teachers to grasp the meaning of generalization formal proof and the creation of an increasing number of concepts on higher levels of abstraction The book s computer enhanced pedagogy and its strong experiential component enabled by the use of manipulative materials have the potential to reduce mathematics anxiety among teachers and help them develop confidence in teaching the subject matter

through modeling and problem solving Classroom observations of teachers learning mathematics as a combination of theory and experiment confirm that this approach elevates one's mathematical understanding to a higher ground Most of the chapters are motivated by a problem typically found in the elementary mathematics curricula and or standards either National or New York State the context in which the author prepare teachers By exploring traditional problems in depth teachers can uncover fundamental mathematical concepts and ideas hidden within a seemingly mundane task The need to have experience in going beyond traditional expectations for learning is due to the constructivist orientation of contemporary mathematics pedagogy that encourages students to ask questions about mathematics they study Each chapter except the last one includes an activity set that can be used for the development of the variety of assignments for teachers Digital tools used in the book include spreadsheets Wolfram Alpha GeoGebra Kid Pix Studio Deluxe and Graphing Calculator Pacific Tech

Mathematical Knowledge in Teaching Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in Mathematical Knowledge in Teaching are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching

The Power of Picture Books in Teaching Math and Science Lynn Columbia, 2017-05-12 This book's 50 plus lessons each based on a different picture book or story will help classroom teachers build a foundation for teaching math science and social studies concepts to their students Each lesson uses children's literature to make challenging abstract concepts relevant to children's lives inviting them to learn these concepts while responding to a story's illustrations theme characters and plot The lessons also demonstrate how teachers can use children's literature to meet national standards in math science and social studies Chapters 1 through 5 set the stage for using picture books discussing the effective imaginative integration of literature into the classroom Teachers will learn to create an environment that ensures that when children and books come together the experience is enjoyable and thought provoking Chapters 6 through 9 provide individual lessons by grade level with detailed activities based on specific books
