The Report: Oman 2015 Oxford Business Group, 2015-01-21 As with most of its neighbours in the GCC region oil and gas remains a significant contributor to Oman s economy accounting for around 50% of GDP While the recent slump in oil prices is a concern increased investment in enhanced oil recovery techniques in recent times has attempted to make up for this decline with supply increasing as a result Meanwhile Oman s industrial sector particularly the petrochemicals segment is poised for large expansion with ongoing investment in downstream infrastructure and new facilities in the pipeline for the Sohar and Salalah industrial regions expected to contribute significantly to output before 2020 Added to this is the rapid development of Oman s ports rail and airports which is expected to drive its reputation as a regional logistics hub while developing the tourism sector which is considered as key moving forward Lithium-Sulfur Batteries: Key Parameters, Recent Advances, Challenges and Applications Muhammad Suleman Tahir, Muhammad Bilal Tahir, Muhammad Sagir, Abdullah Mohamed Asiri, 2024-05-02 This book provides an excellent review and analysis of the latest information on rechargeable Li S battery research With a clear and concise writing style and in depth technical material this book will appeal to undergraduates and graduates researchers chemists material scientists and physicists working in the field of energy storage especially those with an interest in Li S battery technology IEEE Electrical Insulation Magazine shows lithium sulfur Li S batteries give us an alternative to the more prevalent lithium ion Li ion versions and are known for their observed high energy densities Systems using Li S batteries are in the early stages of development and commercialization however could potentially provide higher safer levels of energy at significantly lower cost In this book the history scientific background challenges and future perspectives of the lithium sulfur system are presented by experts in the field Focus is on past and recent advances of each cell compartment responsible for the performance of the Li S battery and includes analysis of characterization tools new designs and computational modeling As a comprehensive review of the current state of play it is ideal for undergraduates graduate students researchers physicists chemists and materials scientists interested in energy storage material science and electrochemistry *Microbial Connections Between the Subsurface Sulfur Cycle and Other Elemental Cycles* Alexandra V. Turchyn, Orit Sivan, Shuhei Ono, Tanja Bosak, 2018-11-16 Sulfur has many redox states and is a

major metabolite in suboxic and anaerobic environments including but not restricted to marine and marginal marine sediments the water column of oxygen minimum zones salt marshes and oil wells Microbially mediated redox cycling of sulfur typically comprises dissimilatory sulfate reduction MSR sulfide reoxidation disproportionation and the oxidation and reduction of sulfur redox intermediates These processes contribute to the degradation of organic matter link the cycles of sulfur and carbon control the production and consumption of methane and are critical for the long term budget of O₂ in the atmosphere Microbial and abiotic processes at redox interfaces also connect the sulfur cycle to the redox cycles of nitrogen iron and other elements producing distinctive geochemical and molecular signatures Studies that couple microbiology with stable isotope geochemistry have informed interpretations of microbial sulfur cycling in modern and past environments Laboratory based studies and models of MSR have sought to understand the physiological and environmental controls of the magnitude of sulfur isotope fractionation The fractionations of stable sulfur and oxygen isotopes during MSR are also used to track enzymatic activity during MSR and processes that oxidize sulfide in the presence of environmental oxidants Outstanding questions in the field concern the importance of oxidative processes within the natural environment the delivery of oxidants and carbon sources to the zones of sulfate reduction and the ability to detect or reconstruct oxidative processes from the chemical isotopic metagenomic transcriptomic proteomic and metabolomics profiles in the environment Recent studies have emphasized the complex connections between sulfur and methane iron nitrogen and other elements These links may involve the redox cycling of species that occur at concentrations difficult to detect by standard geochemical techniques or that are cycled at very rapid rates cryptic cycles Of particular interest is the use of isotope geochemistry to quantify links among various electron acceptors including sulfate ferric iron and nitrate during the anaerobic methane oxidation For example recent geochemical measurements have hinted that microbial sulfate reduction coupled to organic matter oxidation is mechanistically different to when sulfate reduction is coupled to methane oxidation Recent studies have also suggested a possible contribution of a number of previously uncultured microbial groups in sulfur cycling in sulfidic environments inspiring further studies of these organisms and their partnerships in anaerobic environments This Research Topic highlights studies of microbial interactions processes and communities that couple the sulfur cycle to the cycles of other elements in aphotic environments

Biological Wastewater Treatment: Principles, Modeling and Design Guang-Hao Chen, Mark C.M. van Loosdrecht, G.A. Ekama, Damir Brdjanovic, 2020-07-15 The first edition of this book was published in 2008 and it went on to become IWA Publishing's bestseller Clearly there was a need for it because over the twenty years prior to 2008 the knowledge and understanding of wastewater treatment had advanced extensively and moved away from empirically based approaches to a fundamental first principles approach based on chemistry microbiology physical and bioprocess engineering mathematics and modelling However the quantity complexity and diversity of these new developments was overwhelming for young water professionals particularly in developing countries without readily available access to advanced level tertiary education courses in wastewater treatment For a whole new generation of young scientists and engineers entering the wastewater treatment profession this book assembled and integrated the postgraduate course material of a dozen or so professors from research groups around the world who have made significant contributions to the advances in wastewater treatment This material had matured to the degree that it had been codified into mathematical models for simulation with computers The first edition of the book offered that upon completion of an in depth study of its contents the modern approach of modelling and simulation in wastewater treatment plant design and operation could be embraced with deeper insight advanced knowledge and greater confidence be it activated sludge biological nitrogen and phosphorus removal secondary settling tanks or biofilm systems However the advances and developments in wastewater treatment have accelerated over the past 12 years since publication of the first edition While all the chapters of the first edition have been updated to accommodate these advances and developments some such as granular sludge membrane bioreactors sulphur conversion based bioprocesses and biofilm reactors which were new in 2008 have matured into new industry approaches and are also now included in this second edition The target readership of this second edition remains the young water professionals who will still be active in the field of protecting our precious water resources long after the aging professors who are leading some of these advances have retired The authors all still active in the field are aware that cleaning dirty water has become more complex but that it is even more urgent now than 12 years ago and offer this second edition to help the young water professionals engage with the scientific and bioprocess engineering

principles of wastewater treatment science and technology with deeper insight advanced knowledge and greater confidence built on stronger competence

Energy Security in Japan Dr Vlado Vivoda, 2014-04-28 For a country already uneasy about energy security the 2011 earthquake and tsunami which caused a nuclear catastrophe at the Fukushima nuclear power plant turned pre existing Japanese concern about the availability of energy into outright anxiety The subsequent closure of many nuclear reactors meant Japan needed to replace lost power quickly and so had no choice but to secure additional fossil fuels undermining Japanese diversification policy and increasing global and regional

competition for energy This switch has been at a cost to the already weak Japanese economy whilst the increase in fossil fuel consumption has caused a significant increase in greenhouse gas emissions In this book Vlado Vivoda examines the drastically changed environment following the disaster in order to analyse Japan s energy security challenges and evaluate Tokyo s energy policy options Looking at how the disaster exacerbated Japan s existing energy security challenges Vivoda considers the best policy options for Japan to enhance national energy security in the future exploring the main impediments to change and how they might be overcome
