Efimov,Mark W. Kroll,Patrick Tchou,2008-11-07 Pacing and defibrillation have become the leading therapeutic treatments of heart rhythm disorders

including bradycardia and tachycardia The success of these therapies is largely due to centuries of scientific inquiry into the fundamental mechanisms of bioelectric phenomena in the heart History of successful development of bioelectric therapies includes development of experimental and theoretical methodologies novel bioengineering approaches and state of the art clinical implantable device therapies The purpose of this book is to present a uniform thematic collection of reviews written by the leading basic and applied scientists working in basic bioengineering research laboratories who have contributed to the development of current understanding of the fundamental mechanisms of pacing and electrophysiology and who are at the leading edge of further developments in electrotherapy The book will start from the historic overview of the subject including the development of the pacemaker and defibrillator evolution of theories of cardiac arrhythmias and experimental methods used in the field over the centuries Leading experts in the field will write these chapters The second part of the book will focus on rigorous treatment of the fundamental theory of interaction between electric field and cardiac cell tissue and organ Chapters will be written by top notch scientists who made critically important contributions to the development of these theories Part 3 will provide summary of several decades of research involving electrode recordings and multielectrode mapping of ventricular fibrillation and defibrillation in humans and animal models of arrhythmias Part 4 will present new insights into defibrillation gained due to the advent of optical imaging technology which permitted to map defibrillation without overwhelming shock induced artifacts present in electrode recordings Part 5 will provide rigorous overview of the methodologies which made research of physiological and engineering aspects of electrotherapy possible And finally part 6 will present possible future of implantable devices and electrotherapy in the treatment of cardiac rhythm disorders Focus

on Environmental Research Emma B. Davis, 2006 The environment is considered the surroundings in which an organism operates including air water land natural resources flora fauna humans and their interrelation It is this environment which is both so valuable on the one hand and so endangered on the other And it is people which are by and large ruining the environment both for themselves and for all other organisms This book reviews the latest research in this field which is vital for everyone

The Sinus Node F.I. Bonke, 2012-12-06 For the clinician the sinus node is more or less a hidden structure and only by indirect assessment he is able to say something about the function of this center of pacemaker activity The morphologist however is able to describe the structural microscopic and even electronmicroscopic features of this structure The only disadvantage is that as soon as he is coming into the picture the tissue is dead The physiologist tries to investigate the electrophysiological behavior of the sinus node Since there is not a human being willing to give his sinus node for research he has to do his investigation on isolated preparations of animals Though there are a lot of experts in the field of the sinus node they nearly never speak the same language Therefore it was my dream to bring all those people or at least some of them together on a workshop I had the feeling that it was important to organize such a meeting without an audience but only with experts
