

Perspective on the Great Depression and the New Deal - Paper Example Essay

September 4th, 1929 marked the start of the Great Depression, a severe, and the worst global economic depression of the 20th century. It lasted for most of the 1930s before the New Deal was put to place. The leading cause of the Great Depression, which started in the United States was a significant fall in stock prices leading to the crash of the stock market on October 29, 1929, which sent investors into a panic and eventually did away with most of them. The period between this date and 1932 saw a fall in the global gross domestic product (GDP) by 15%. Many countries were profoundly affected by losses in almost every sector, from construction to farming. The Great Depression is described as the most severe economic downturn in the history of the industrialized world. A drop in investment and consumer spending caused declines in industrial production and employment most companies laid off workers. By the end of 1933, it is estimated that some 15 million Americans were without jobs.

Roosevelt was elected President of the United States and took office in 1933. He made clear that he intended to stabilize the economy and create jobs to the millions of unemployed population. The New Deal refers to a chain of programs and projects instituted during this period by President Franklin D. Roosevelt, whose goal was to reinstate the well-being of the nation's economy. President Franklin Roosevelt is credited to have brought an air of buoyancy that swiftly rallied the support of the people to his ideas. FDR introduced the New Deal in three waves which lasted from 1933 to 1939. He used Congress to pass several programs that stabilized the U.S. financial system. These projects were geared towards building private-public partnerships to improve manufacturing. Which went against the beliefs of President Herbert Hoover, whose government was described as a "hear nothing, see nothing, do nothing."

Unlike FDR, Hoover acted as a bystander who did little after the stock market crash to prevent or end the great depression. However, this statement is not wholly true since he did launch some projects in federal spending, wage policy, agriculture, international trade, tax policy and immigration. FDR also increased federal spending in his government. This clearly shows that he did not believe in the idea of budget cutting like Roosevelt. Hoover was a great believer in freedom as he stated in a speech, " Freedom is the open window through which pours the sunlight of the human spirit and human dignity" (Hoover, 1928) he thus saw increasing taxes as a form of restricting freedom. Since he saw it as a way of dictating how money was spent. This is an idea that Roosevelt disagreed with since he saw raising taxation as an increase in freedom. His idea was merely based on the phrase of taxation with representation. He saw high taxes as a way of enabling the government to recover from the Great Depression and empower its citizens by providing better services such as higher education and health services, as well as reclaiming job opportunities, which generally provided them with more freedom. "I prefer, and I am sure you prefer that broader definition of liberty under which we are moving forward to greater freedom, to greater security for the average man than he has ever known before in the history of America" (Roosevelt, 1933)

Review of the Department of the Treasury's Foreclosure Prevention Programs, **A Taxonomy of Financial Crisis Resolution Mechanisms** Charles W. Calomiris, Daniela Klingebiel, 2004 The goals of financial restructuring are to reestablish the creditor debtor relationships on which the economy depends for an efficient allocation of capital and to accomplish that objective at minimal cost Costs include direct costs to taxpayers of financial assistance and the indirect costs to the economy that result from misallocations of capital and incentive problems resulting from the restructuring Calomiris Klingebiel and Laeven review cases in which countries used alternative mechanisms to restructure their financial and corporate sectors Countries typically apply a combination of tools including decentralized market based mechanisms and government managed programs Market based strategies seek to strengthen the capital base of financial institutions and borrowers to enable them to renegotiate debt and resume new credit supply

Government led restructuring strategies often include the establishment of an entity to which nonperforming loans are transferred or the government's sale of financial institutions sometimes to foreign entrants. Market based mechanisms can in principle resolve coordination problems that countries face in the wake of massive debtor and creditor insolvency with acceptably low direct and indirect costs particularly when those mechanisms are effective in achieving the desirable objective of selectivity. However these mechanisms depend for their success on an efficient judicial system a credible supervisory framework and authority with sufficient enforcement capacity and a lack of corruption in implementation. Government managed programs may not seem to depend as much on efficient legal and supervisory institutions for their success but in fact these approaches in particular the transfer of assets to government owned asset management companies also depend on effective legal regulatory and political institutions for their success. Further a lack of attention to incentive problems when designing specific rules governing financial assistance can aggravate moral hazard problems unnecessarily raising the costs of resolution. These results suggest that policymakers in emerging market economies with weak institutions should not expect to achieve the same level of success in financial restructuring as other countries and that they should design resolution mechanisms accordingly. Despite the theoretical attraction of some complex market based mechanisms simpler mechanisms that afford quick resolution of outstanding debts that improve financial system competitiveness and that offer little discretion to governments are most effective. This paper a product of the Financial Sector and Operations Policy Department is part of a larger effort in the department to study the containment and resolution of financial crises. monetary policy labor markets wages and prices the distribution of income and wealth international capital flows and international trade and development Central Banking, Asset Prices and Financial Fragility Éric Tymoigne, 2008-11-21 The current literature on central banking contains two distinct branches On the one side research focuses on the impact of monetary policy on economic growth unemployment and output price inflation while ignoring financial aspects On the other side some scholars leave aside macroeconomics in order to study the narrow but crucial subjects of financial behaviours and financial supervision and regulation This book aims at merging both approaches by using macroeconomic analysis to show that financial considerations should be the main preoccupation of central banks Eric Tymoigne shows how different views regarding the conception of asset pricing lead to different positions regarding the appropriate role of a central bank in the economy In addition Hyman P Minsky's framework of analysis is used extensively and is combined with other elements of the Post Keynesian framework to study the role of a central bank Tymoigne argues that central banks should be included in a broad policy strategy that aims at achieving stable full employment Their sole goal should be to promote financial stability which is the best way they can contribute to price stability and full employment Central banks should stop moving their policy rate frequently and widely because that creates inflation speculation and economic instability Instead Tymoigne considers a pro active financial policy that does not allow financial innovations to enter the economy until they are certified to be safe and that focuses on analyzing systemic risk He argues that central banks should be a guide and a reformer that allow a smooth financing and funding of asset positions while making sure that financial fragility does not increase drastically over a period of expansion This book will be of interest to students and researchers engaged with central banking
