In the late 26th century, overpopulation on Earth is reaching the breaking point, and humanity must find new frontiers. The terraforming of Mars has taken centuries but is now complete. The colonization of Mars by humanity is an epoch-making event, but an unintended side effect of the terraforming process unleashes a horror no one could ever have imagined...

In order to protect their crewmates, Akari and Michelle use their abilities and head into battle against the Terraformers, who have evolved unique and terrifying new forms! The enemy's astounding strength forces them into an unexpectedly desperate fight. Meanwhile, the whereabouts of the other teams scattered around Mars become clear, and the battle between humans and the demons they created reaches a new intensity.

Mars and the Earthlings: A Realistic View on Mars Exploration and Settlement Cyprien Verseux, Muriel Gargaud, Kirsi Lehto, Michel Viso, 2025-01-17

In an era of public Mars fascination, this book offers an objective presentation of the challenges of crewed Mars missions and discusses scenarios of Mars settlements under scientific, technical, social, economic, ethical, and political aspects. With the aim to make the reader comprehend what is plausible and what is at stake, the book tries to clarify misconceptions and half-truths spreading rapidly in the public. The authors argue that approximations and misinformation should be countered for two main reasons. First, to avoid missing out on the benefits that Mars exploration may bring, including major scientific discoveries and an inspiring federative human endeavor. Second, to remediate dangerous delusions such as the idea that humanity could be transferred there should the Earth become inhabitable in the near term. In preparation for this book, a group of European world-renowned scientists from fields as diverse as astronomy, planetology, geology, biology, philosophy, or economics, as well as astronauts and science fiction writers, was gathered to discuss Mars missions ranging from near-term robotic missions all the way to large-scale settlements and even the feasibility of terraforming. For each, they draw arguments from their domains of expertise to discuss what is feasible and what is desirable. The result provides researchers with an objective review of the field, policy makers with a reference to make informed decisions, and the general public with a tool to form educated opinions.
