

Mica undercut inspection limits: 0.5-0.8 mm

Mica undercut correction limits: 0.2 mm

3) Checking the Armature for Insulation

If there is electrical leakage between the commutator and shaft, replace the whole armature.

- 4) If the field coil is perfectly insulated and conductivity is also good, but the dynamo will not generate electricity, the core of the armature coil might be short-circuited. Check the armature with a growler at a special service shop.

D. Checking the Condenser

1) Insulation Tests

Hook up an electro tester (service tester) for the insulation resistance test, and attach the tester terminals to those of the condenser. If the tester needle swings once and then returns to its original position, the condenser is in good condition. Condenser leakage will hold the needle at a maximum reading. If the reading is more than 3MΩ, the condenser is good. Ground the condenser terminals to discharge the stored electricity.
