Unit 4 : Polynomials + Radical Functions

State the number of roots of each function. List all possible rational roots. One root has been given, and factor each function.

1) $x^4 - x^3 + 3x^2 + 31x + 26 = 0$; $2 + 3i$

2) $x^4 - 5x^3 - 23x^2 + 33x + 50 = 0$; $2 + \sqrt{29}$

Write a polynomial function of least degree with integral coefficients that has the given zeros.

3) $\frac{1}{4}$ mult. 2, $-\frac{1}{3}$

4) i , $2\sqrt{2}$

State if the given binomial is a factor of the given polynomial. Show your work.

5) $(7k^4 - 48k^3 - 67k^2 + 17k + 64) \div (k - 8)$

6) $(6m^4 - 40m^3 - 73m^2 + 74m - 16) \div (m - 8)$

Factor each and find all roots.

7) $x^4 + 2x^2 - 15 = 0$

8) $x^3 + 8 = 0$

Verify if the given value is a root of the function. (Use Remainder Theorem)

9) $f(x) = 2x^4 + 7x^3 + 5x^2 + 4x - 7$ at $x = -3$

10) $f(n) = n^5 - 7n^3 - 6n^2 - 3n + 7$ at $n = 3$

Applications in Mathematical Physics J.S.R. Chisholm, A.K. Common, 2012-12-06 William Kingdon Clifford published the paper defining his geometric algebras in 1878 the year before his death Clifford algebra is a generalisation to n dimensional space of quaternions which Hamilton used to represent scalars and vectors in real three space it is also a development of Grassmann's algebra incorporating in the fundamental relations inner products defined in terms of the metric of the space It is a strange fact that the Gibbs Heaviside vector techniques came to dominate in scientific and technical literature while quaternions and Clifford algebras the true associative algebras of inner product spaces were regarded for nearly a century simply as interesting mathematical curiosities During this period Pauli Dirac and Majorana used the algebras which bear their names to describe properties of elementary particles their spin in particular It seems likely that none of these eminent mathematical physicists realised that they were using Clifford algebras A few research workers such as Fueter realised the power of this algebraic scheme but the subject only began to be appreciated more widely after the publication of Chevalley's book *The Algebraic Theory of Spinors* in 1954 and of Marcel Riesz Maryland Lectures in 1959 Some of the contributors to this volume Georges Deschamps Erik Folke Bolinder Albert Crumeyrolle and David Hestenes were working in this field around that time and in their turn have persuaded others of the importance of the subject Geometric and Topological Methods for Quantum Field Theory Hernan Ocampo, Eddy Pariguan, Sylvie Paycha, 2010-04-29 Aimed at graduate students in physics and mathematics this book provides an introduction to recent developments in several active topics at the interface between algebra geometry topology and quantum field theory The first part of the book begins with an account of important

results in geometric topology It investigates the differential equation aspects of quantum cohomology before moving on to noncommutative geometry This is followed by a further exploration of quantum field theory and gauge theory describing AdS CFT correspondence and the functional renormalization group approach to quantum gravity The second part covers a wide spectrum of topics on the borderline of mathematics and physics ranging from orbifolds to quantum indistinguishability and involving a manifold of mathematical tools borrowed from geometry algebra and analysis Each chapter presents introductory material before moving on to more advanced results The chapters are self contained and can be read independently of the rest

Scientific and Technical Aerospace Reports ,1989 From Here to Infinity Andrea Del Centina,Alessandro Gimigliano,2025-03-03 This monograph traces the development of projective geometry from its Greek origins to the early 20th century It covers Renaissance perspective studies and insights from the late sixteenth to seventeenth centuries examining the contributions of Desargues and Pascal Most of the book is devoted to the evolution of the subject in the 19th century from Carnot to von Staudt In particular the book offers an unusually thorough appreciation of Brianchon s work a detailed study of Poncelet s innovations and a remarkable account of the contributions of M bius and Pl icker It also addresses the difficult question of the historical relationship between synthetic and analytic points of view in geometry analyzing the

work of prominent synthetic geometers Steiner Chasles and von Staudt in detail The book concludes around 1930 after the synthetic point of view was axiomatized and the analytic point of view became intertwined with algebraic geometry Balancing historical analysis with technical precision and providing deep insights into the evolution of the mathematics this richly illustrated book serves as a central reference on the history of projective geometry
