Today it is more popular than ever and for many guitarists has overtaken the Stratocaster as the Fender to own and play. The Tele is the longest lived solidbody electric played by everyone from Muddy Waters to Keith Richards from Radiohead to Snow Patrol. Its sheer simplicity and versatility are vividly illustrated here through interviews with Jeff Beck, James Burton, Bill Kirchen, John 5 and more. The book is three great volumes in one: a compendium of luscious pictures of the most desirable Teles, a gripping story from the earliest days to the latest exploits and a detailed collector's guide to every Tele ever made. Packed with pictures of great players, collectable catalogs, period press ads and cool memorabilia, *The Telecaster Guitar Book* is the one Tele book that all guitar fans will want to add to their collection.

Cell Signaling Reactions Yasushi Sako, Masahiro Ueda, 2010-11-04 This book encompasses the exciting developments and challenges in the fast moving and rapidly expanding research field of single molecule kinetic analysis of cell signaling that promises to be one of the most significant and exciting areas of biological research for the foreseeable future. Cell signaling is carried out by complicated reaction networks of macromolecules and single molecule analyses has already demonstrated its power to unravel complex reaction dynamics in purified systems. To date most of the published research in the field of single molecule processes in cells focus on the dynamic properties: translational movements of the centre of mass of biological molecules. However we hope that this book presents as many kinetic analyses of cell signaling as possible. Although single molecule kinetic analysis of cellular systems is a relatively young field when compared with the analysis of single molecule movements in cells, this type of analysis is highly important because it directly relates to the molecular functions that control cellular behavior and in the future single molecule kinetic analysis will be largely directed towards cellular systems. Thus we hope that this book will be of interest to all those working in the fields of molecular and cell biology as well as biophysics and biochemistry.
