A Conceptual History of Chinese -Isms Ivo Spira, 2015-05-12 In A Conceptual History of Chinese Isms Ivo Spira explores the linguistic and rhetorical development of Chinese isms as well as the key concept *zh y ism* itself He argues that the introduction of this

concept from Japan in the 1890s inaugurated an Age of Isms in which it served as a conceptual focus for the stereotypical categorization of people and the utopian imagination of the future The book focuses on Chinese isms in the formative period 1895-1925 through a close reading of key primary sources covering linguistic conceptual and rhetorical aspects of their use in ideological reasoning Spira emphasizes the combination of internal traditional and external Western and Japanese factors in the emergence of Chinese isms Winners Alastair Campbell, 2015-10-15 How do sportsmen excel entrepreneurs thrive or individuals achieve the ambitions Is their ability to win innate Or is the winning mindset something we can all develop In the tradition of *The Talent Code* and *The Power of Habit* Campbell draws on the wisdom of an astonishing array of talented people from elite athletes to media mavens from rulers of countries to rulers of global business empires Alastair Campbell has conducted in depth interviews and uses his own experience in politics and sport to get to the heart of success He examines how winners tick He considers how they build great teams He analyzes how these people deal with unexpected setbacks and new challenges He judges what the very different worlds of politics business and sport can learn from one another And he sets out a blueprint for winning that we can all follow to achieve our goals **The NIH Record** ,1994

Improving Doctoral Education and Research Development for Sustainability Tariq, Muhammad Usman, 2025-06-30 Improving doctoral education and research development advances sustainability in an interconnected world As global challenges like climate change resource depletion and social inequality rise there is a demand for skilled researchers capable of generating innovative interdisciplinary solutions Doctoral programs must evolve to increase academic expertise while fostering critical thinking collaboration and practical problem solving skills By aligning doctoral training with sustainability goals academic institutions can empower future researchers to contribute to the creation of resilient equitable and environmentally responsible societies *Improving Doctoral Education and Research Development for Sustainability* examines enhanced doctoral education practices to support robust and sustainable research and development It explores innovative strategies frameworks and practices that can transform doctoral studies to build resilient research capacities This book covers topics such as ethics and law curricula and learning models and is a useful resource for educators academicians researchers and scientists Radiation-induced and oxidative DNA damages Antonio Monari, Elise Dumont, Chrysostomos Chatgililoglu, 2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption Yet the protection and repair strategies are still error prone DNA lesions are produced including the most complex and highly mutagenic ones An important threat to DNA stability comes from photosensitization i.e. from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis Elucidating the processes leading to DNA

damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair Due to the complexity of the field lying at the frontiers between chemistry physics and biology multidisciplinary strategies allying modeling and experience are needed This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity structural characterization photo chemistry and photo physics as well as repair mechanism It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques *Official Journal of the European Communities* ,1998
