The Corporate Responsibility Movement Jem Bendell,2017-09-08 Corporate social responsibility is now an established agenda for large companies with a new profession emerging that engages in the social and environmental contribution of business How has this agenda emerged over time What were the key events and actors How has this new movement of committed individuals been taking shape around the globe Insights into these questions come from a review of the first half of first decade of the 21st century The Corporate Responsibility Movement compiles Lifeworth s highly praised Annual Reviews of Corporate Responsibility from 2001 to 2005 It is introduced with a new overview by the lead author of

those reviews Dr Jem Bendell in a piece that examines the trajectory of a new social movement in and around business At a time of searching questions about the future of finance Dr Bendell argues that a new concept of capital democracy is emerging from within the community of people working towards corporate responsibility which could be mainstreamed as a socially and environmentally enhanced system of economy He calls on professionals researchers and policy makers to embrace an ambitious agenda for corporate responsibility and develop greater insight into acting together as a movement for change This book is an essential resource for business libraries recording analysing and contextualising some of the key events issues and trends during this historic period in the development of the corporation **New Ways of Doing**

Business Mark A. Abramson, Ann M. Kieffaber, 2003-08-04 In their introduction the editors of *New Ways of Doing Business* assert that in retrospect it will be apparent that today's government that of the early years of the 21st century was undergoing its most significant transformation since the decade of the 1930s when direct government delivered services grew significantly as part of the New Deal This newest volume in the IBM Endowment for the Business of Government series is an invaluable guide to navigating the sometimes controversial changes taking place in the internal operations of government the delivery of services to citizens and the delivery of environmental programs Possibly the most monumental change taking place in our modern government is the lessening allegiance to the old model of in house in departmental performance of tasks The new model asks how and by whom can the tasks of government best be performed The answer sometimes lies with another inter governmental department leading to an in house atmosphere of healthy competition and entrepreneurship and sometimes with outside contractors *New Ways of Doing Business* provides descriptions and guidelines for successfully navigating management under the new model There are also dramatic new ways in which services to the public can now be delivered via the Internet via contracts with private organizations and via faith based initiatives and business improvement districts Experts provide valuable checklists and guidelines and case studies exploring the merits and disadvantages of these new service delivery routes Finally *New Ways of Doing Business* explores what the editors call one of the most highly experimental policy arenas in government that of the delivery of environmental programs The authors of these articles explain via case study analysis many of the innovative programs currently in existence and postulate that the traditional command and control stance of government to businesses will be superseded by a flexibility that will allow for increased eco efficiency and attention to market based regulatory tools *Sourcing to Support the Green Initiative* Lisa Ellram, 2013-07-23 The green or environmental sustainability movement has taken hold throughout the world Its staying power is confirmed by that fact that environmental emphasis in organizations did not decrease during the recent global recession but rather increased However since most organizations rely heavily on their supply base for providing components materials and services that become part of their final products organizations must revisit their sourcing processes and choices to have a real impact on the environment This book begins with an introduction to the idea of sustainability and to

the concept of what it means to source to support an organization's green initiatives and why this is important from a holistic lifecycle perspective. The initial chapters will also provide a point of view of how green sourcing fits into the organization's entire portfolio of sustainability initiatives. Examples of industries and associations that lead the way in green sourcing will be presented. In addition, best practices in green sourcing will be discussed. The book also provides a perspective on how organizations can encourage and support their suppliers in pursuing green initiatives and what types of initiatives provide a good starting point.

Corporate Responses to Climate Change Rory Sullivan, 2017-09-08 Given the scale of the greenhouse gas emissions reductions that are seen as necessary to avert the worst effects of climate change, policy action is likely to result in a complete reshaping of the world economy. The consequences are not confined to obvious sectors such as power generation, transport and heavy industry; virtually every company's activities, business models and strategies will need to be completely rethought. In addition, beyond their core business activities, companies have the potential to make important contributions to reducing greenhouse gas emissions through the allocation of capital through innovation and the development of new technologies and through their influence on the actions taken by governments on climate change. *Corporate Responses to Climate Change* has been written at a crucial point in the climate change debate with the issue now central to economic and energy policy in many countries. The book analyses current business practice and performance on climate change in the light of the dramatic changes in the regulatory and policy environment over the last five years. More specifically, it examines how climate change related policy development and implementation have influenced corporate performance with the objective of using this information to consider how the next stage of climate change policy regulation, incentives, voluntary initiatives may be designed and

implemented in a manner that delivers the real and substantial reductions in greenhouse gas emissions that will be required in a timely manner while also addressing the inevitable dilemmas at the heart of climate change policy e g how are concerns such as energy security to be squared with the need for drastic reductions in greenhouse gas emissions Can economic growth be reconciled with greenhouse gas emissions Can emissions reductions be delivered in an economically efficient manner The book focuses primarily on two areas First how have companies actually responded to the emerging regulatory framework and the growing political and broader public interest in climate change Have companies reduced their greenhouse gas emissions and by how much Have companies already started to position themselves for the transition to a low carbon economy Does corporate self regulation unilateral commitments and collective voluntary approaches represent an appropriate response to the threat presented by climate change What are the barriers to further action Second the book examines what the key drivers for corporate action on climate change have been regulation stakeholder pressure investor pressure Which policy instruments have been effective which have not and why How have company actions influenced the strength of these pressures Corporate Responses to Climate Change is a state of the art analysis of corporate action on climate change and will be essential reading for businesses policy makers academics NGOs investors and all those interested in how the business sector is and should be dealing with the most serious environmental threat faced by our planet
