This conversion chart is based on educational levels from the published "Lexile Framework" chart. A smoothed curve was fit through the grade-level points indicated here, and regression analysis provided the equation:

$$\text{Lexile} = 300 \ln(\text{Grade Level}) \quad \text{or, the inverse:} \quad \text{Grade Level} = e^{\frac{\text{Lexile}}{300}}$$

The resulting regression equation was then used to calculate the educational grade levels in the above table. A separate study of over 400 titles confirmed that their Accelerated Reader® (Advantage Learning's reading management software) reading levels and Lexile ratings are correlated, and that regression analysis on published Accelerated Reader and Lexile reading levels produces a very similar conversion equation.
