Performance Analysis: GPTA-2

STUDENT's articulation skills were formally assessed using the (GETA₂). Assessment targets in the initial, medial and final positions of the word were elicited in single-word utterances and in sentences. To collect data in single-word utterances, **STUDENT** was presented with 48 colored pictures and was asked to name them spontaneously. During this task, **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**. To collect data at the sentence level, **STUDENT** participated in sentence repetition tasks. During sentence repetition tasks **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**.

Below is a table representative of the single word errors **STUDENT** exhibited during administration of the Sounds-in-Words subtest. The table also indicates the state's designated age at sound acquisition.

The state of Missouri's normative data for sound acquisition suggests that the **X** phonemes are typically acquired by **X** years of age. **STUDENT's** word production of these phonemes **was not** considered developmentally appropriate at **STUDENT's** chronological age level of **X** years, **X** months. The evaluating speech-language pathologist determined that **STUDENT's** errors are not the result of dialectal differences or second language influence.
