An Integrated Formal Task Specification Method for Smart Environments Maik Wurdell, 2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e.g. pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e.g. walking to the speaker's desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e.g. display slides at the projection canvas Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved The thesis introduces a task modeling language in order to cope with the given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms

Smart Automotive Mobility Gerrit Meixner, 2020-09-16 This book focuses on smart results in the field of smart automotive mobility concentrating on semi autonomous cars The results are based on 5 recently finished public funded research projects with a budget of over 15 million Euro Providing insights into the next generation of personalized mobility on the road the authors discuss personalized adaptive cooperative systems for highly automated cars and how they can be developed in a human centered way Furthermore the book reports on a cooperative driver vehicle interaction How can the driver and the vehicle support each other What are their best skills and how can they benefit from each other It also gives novel insights on intuitive steering gestures on the steering wheel which initiate maneuvers to be executed by the automation and to be supervised by influenced or interrupted by the driver The book finishes with information on a cooperative laser beam system which improves the communication between the different road participants to optimize the road safety of tomorrow Smart Automotive Mobility Reliable Technology for the Mobile Human is an ideal

source for researchers students and practitioners working in the area of intelligent systems for the automotive industry It gives valuable and condensed information from multi million Euro research projects funded by the German Federal Ministry of Education and Research Connected and Autonomous Vehicles in Smart Cities Hussein T. Mouftah,Melike Erol-Kantarci,Sameh Sorour,2020-12-17 This book presents a comprehensive coverage of the five fundamental yet intertwined pillars paving the road towards the future of connected autonomous electric vehicles and smart cities The connectivity pillar covers all the latest advancements and various technologies on vehicle to everything V2X communications networking and vehicular cloud computing with special emphasis on their role towards vehicle autonomy and smart cities applications On the other hand the autonomy track focuses on the different efforts to improve vehicle spatiotemporal perception of its surroundings using multiple sensors and different perception technologies Since most of CAVs are expected to run on electric power studies on their electrification technologies satisfaction of their charging demands interactions with the grid and the reliance of these components on their connectivity and autonomy is the third pillar that this book covers On the smart services side the book highlights the game changing roles CAV will play in future mobility services and intelligent transportation systems The book also details the ground breaking directions exploiting CAVs in broad spectrum of smart cities applications Example of such revolutionary applications are autonomous mobility on demand services with integration to public transit smart homes and buildings The fifth and final pillar involves the illustration of security mechanisms innovative business models market opportunities and societal economic impacts resulting from the soon to be deployed CAVs This book contains an archival collection of top quality cutting edge and multidisciplinary research on connected autonomous electric vehicles and smart cities The book is an authoritative reference for smart city decision makers automotive manufacturers utility operators smart mobility service providers telecom operators communications engineers power engineers vehicle charging providers university professors researchers and students who would like to learn more about the advances in CAEVs connectivity autonomy electrification security and integration into smart cities and intelligent transportation systems **Smart Transportation Systems 2020** Xiaobo Qu,Lu Zhen,Robert J. Howlett,Lakhmi C. Jain,2020-05-30 This book gathers selected papers presented at the KES International Symposium on Smart Transportation Systems KES STS 2020 Modern transportation systems have undergone a rapid transformation in recent years producing a range of technological innovations such as connected vehicles self driving cars electric vehicles Hyperloop and even flying cars and with them fundamental changes in transport systems around the world The book discusses current challenges innovations and breakthroughs in smart transportation systems as well as transport infrastructure modeling safety analysis freeway operations intersection analysis and other related cutting edge topics **Applications of Artificial Intelligence for Smart Technology** Swarnalatha, P.,Prabu, S.,2020-10-30 As global communities are attempting to transform into more efficient and technologically advanced metropolises artificial intelligence AI has taken a firm grasp on various professional

fields Technology used in these industries is transforming by introducing intelligent techniques including machine learning cognitive computing and computer vision This has raised significant attention among researchers and practitioners on the specific impact that these smart technologies have and what challenges remain Applications of Artificial Intelligence for Smart Technology is a pivotal reference source that provides vital research on the implementation of advanced technological techniques in professional industries through the use of AI While highlighting topics such as pattern recognition computational imaging and machine learning this publication explores challenges that various fields currently face when applying these technologies and examines the future uses of AI This book is ideally designed for researchers developers managers academicians analysts students and practitioners seeking current research on the involvement of AI in professional practices
