

RN TARGETED MEDICAL SURGICAL: FLUID, ELECTROLYTE, AND ACID-BASE ONLINE PRACTICE 2024 QUESTIONS AND ANSWERS WITH SOLUTIONS

A nurse is assessing a client who has dehydration. Which of the following assessments is the priority?

- a. Skin turgor
- b. Urine output
- c. Weight
- d. Mental status - ANSWER Mental status

The greatest risk to this client is injury from declining mental status or a fall from worsened dehydration. Therefore, assessing the client's mental status is the priority.

A nurse is assessing a client who is using PCA following a thoracotomy. The client is short of breath, appears restless, and has a respiratory rate of 28/min. The client's ABC results are pH 7.52, PoO_2 89 mm hg, and HCO_3^- 24 mEq/L. Which of the following actions should the nurse take?

- a. Instruct the client to cough forcefully.
- b. Assist the client with ambulation.
- c. Provide calming interventions.
- d. Discontinue the PCA. - ANSWER Provide calming interventions

The client's respiratory rate is above the expected range. Calming the client should decrease the respiratory rate, which will cause the client's carbon dioxide levels to increase. This will help correct the pH imbalance.

A nurse is caring for a client who has a sodium level of 155 mEq/L. Which of the following IV fluids should the nurse anticipate the provider to prescribe?

- a. Dextrose 5% in 0.9% sodium chloride
- b. Dextrose 5% in lactated Ringer's
- c. 3% sodium chloride
- d. 0.45% sodium chloride - ANSWER 0.45% sodium chloride

A sodium level of 155 mEq/L is an indication of hypernatremia. The nurse should anticipate a prescription for a hypotonic solution. The 0.45% sodium chloride is a hypotonic solution used to provide free water and treat cellular dehydration, which promotes waste elimination by the kidneys. Dextrose 5% in 0.9% sodium chloride is a hypertonic solution. The 3% sodium chloride is a hypertonic solution. Lactated Ringer's solution contains sodium and other electrolytes and is not indicated for hypernatremia.

Evidence-based Management of Stroke José Biller,, José M Ferro, 2011-06-01 Winner of a HIGHLY COMMENDED AWARD in the Neurology category of the 2012 BMA Medical Book Competition More than five million people die from stroke each year Stroke is also the leading cause of adult disability affecting over 20 million people worldwide with two thirds of stroke victims left permanently disabled We now know that speed of intervention is critical and patient outcomes are determined by a very narrow therapeutic window during which physicians need to be able to make their choice of treatment rapidly based on the best evidence available The purpose of this book is to review that evidence for both medical and surgical therapies as well as preventative strategies drawing on the expertise of leading international authorities to distinguish the issues for which there is a consensus on best practice from those for which the evidence remains inconclusive For example for patients with acute ischemic stroke the first choice is intravenous thrombolytic therapy but does a treatment window of 0

3 hours deliver outcomes significantly better than one of 3 4 5 hours Arterial hypertension is the single most important modifiable risk factor for ischemic stroke but what are the effects of blood pressure reduction among acute stroke patients How effective is blood pressure lowering in primary intracerebral hemorrhage What are the arguments in favour of continuation versus temporary discontinuation of antihypertensive therapy immediately after acute ischemic stroke Endovascular procedures carotid angioplasty stenting are increasingly important but what do the data tell us about their safety Or durability How do they compare with carotid endarterectomy The management of unruptured intracranial aneurysms is rife with controversies clip coil wait and watch The authors examine the evidence for and against Other sections examine the impact of various risk factors and special populations A section on stroke after cardiovascular surgeries reviews the incidence and management of stroke following a whole range of procedures Another examines special risks during pregnancy Lastly the book reviews our understanding of childhood stroke and presents current best practice recommendations for this most challenging group of patients
