The digital infrastructure of media production dissemination and consumption is becoming increasingly complex presenting the challenge of how we should research the digital journalism environment Digital journalism takes many forms we therefore need to revise improve adjust and even invent methods to understand emerging forms of journalism In this book scholars at the forefront of methodological innovations in digital journalism research share their insights on how to collect process and analyse the diverse expressions of digital journalism including online news search results hyperlinks and social media posts As digital journalism content often comes in the form of big data many of these new approaches depart from the traditional methods used in media research in significant ways As we move towards new ways of understanding digital journalism the methods developed for such purposes also need to be grounded in scientific rigour This book aims to share some of the emerging processes by which these methods tools and approaches are designed implemented and validated As such this book not only constitutes a benchmark for thinking about research methods in digital journalism it also provides an entry point for graduate students and seasoned scholars aiming to do research on digital journalism This book was originally published as a special issue of Digital Journalism American Journal of Physics ,1991 Training Manual on Transport

and Fluids John C. Neu, 2009-11-30 I have learned a lot from John Neu over the past years and his book reflects very well his sense of style and purpose Walter Craig McMaster University Hamilton Ontario Canada and Fields Institute for Research in Mathematical Sciences Toronto Ontario Canada John Neu's book presents the basic ideas of fluid mechanics and of the transport of matter in a clear and reader friendly way Then it proposes a collection of problems starting with easy ones and gradually leading up to harder ones Each problem is solved with all the steps explained In the course of solving these problems many fundamental methods of analysis are introduced and explained This is an ideal book for use as a text or for individual study Joseph B Keller Stanford University This book presents elementary models of transport in continuous media and a corresponding body of mathematical technique Physical topics include convection and diffusion as the simplest models of transport local conservation laws with sources as the general framework of continuum mechanics ideal fluid as the simplest model of a medium with mass momentum and energy transport and finally free surface waves in particular shallow water theory There is a strong emphasis on dimensional analysis and scaling Some topics such as physical similarity and similarity solutions are traditional In addition there are reductions based on scaling such as incompressible flow as a limit of compressible flow and shallow water theory derived asymptotically from the full equations of free surface waves More and deeper examples are presented as problems including a series of problems that model a tsunami approaching the shore The problems form an embedded subtext to the book Each problem is followed by a detailed solution emphasizing process and craftsmanship The problems express the practice of applied mathematics as the examination and re examination of simple

but essential ideas in many interrelated examples **Time, Innovation and Mobilities** Peter Frank Peters, 2006 By analyzing historic and contextualized transit practices and case studies of travel in technological cultures car travel air travel and cycling in Dutch towns this book argues that travel cannot simply be reduced to getting from A to B **The Publishers' Trade List Annual**, 1989 **A Student's Manual for A First Course in General Relativity** Robert B.
