Cognition, Everyday Function and Driving Performance in Old Age Katarina Fällman, 2024-10-16 The population of people aged 80 years and older is the fastest growing population in the world. Age is the main risk factor for many diseases and to be able to investigate and help old people when they have symptoms or increased difficulties in their everyday lives there is a need of knowledge of normal functions and abilities in this population. The main aim of this thesis is to present normative data for established cognitive tests from cognitively healthy old persons and to describe and investigate predictors of everyday function and driving performance in old age. The results are based on two projects. The Elderly in Linköping Screening Assessment and The Normative Study of Driving Ability in Old Swedes. Paper I presents normative data for four established cognitive tests.

measuring processing speed attention and executive function from participants that were longitudinally tested at 85 90 and 93 years of age There was no clinically important difference in test results due to gender but educational level affected test results at 85 years of age Age related decline was present for most of the examined tests Paper II presents normative data for age 85 90 and 93 years for two tests of naming ability and verbal comprehension and investigate age related changes from 85 to 93 years of age Higher educational level was associated with better test results Naming ability was found to be more sensitive to aging than verbal comprehension Paper III describes difficulties and changes of everyday function between 85 and 90 years of age Difficulties in everyday function increased significantly over the five year period Decline in everyday function was partly shown to be predicted by concurrent decline in processing speed and self rated health Paper IV describes driving characteristics of drivers aged 75 years and older and examines associations between driving performance and results on cognitive tests and driving habits There was a large variation in driving performance among the older drivers and combined results on cognitive tests were found to be a more robust predictors of driving performance than age although age was still a significant predictor

Cet ouvrage est indispensable pour les médecins généralistes mais également pour les gérontologues et gériatres qui pourront approfondir leur pratique grâce notamment aux cas cliniques.

A Comprehensive Guide to Safety and Aging Barry S. Eckert, Robert Wolf, Amy R. Ehrlich, 2023-06-16. This book is a comprehensive survey on safety for older adults. It contains contributions by experts from over a dozen disciplines including physicians, audiologists, optometrists, mental health professionals, lawyers, occupational therapists, and policy makers. This multidisciplinary approach provides a new and expansive conceptual framework for health care professionals, students, policymakers, and others who care for older adults and promotes an understanding of the many challenges that adults face as they age. This book describes the complex range of issues that need to be considered when safeguarding older adults. We hope that this book will be of benefit to anyone currently working or training to work with older adults, helping them to fully appreciate the many safety issues that can arise. The book will also be useful for both older adults and their caregivers, helping them to identify and address areas of concern. Our goal is to mitigate injury or other harm through an increased understanding of the risks encountered by older adults. This text will also appeal to professionals and graduate students in the fields of human factors and ergonomics, occupational health and safety.

Dementia Care Marie Boltz, James E. Galvin, 2015-09-29. This book provides an overview of the demographic, clinical, and psychosocial context of dementia care. With its focus on patient and family perspectives, this book describes evidence-based approaches towards prevention, detection, and treatment of dementia that is like any other book. The text presents memory clinics, care management, home-based interventions, palliative care, family caregiver programs specific to dementia care. Additionally, the text examines strategies to support transitions to acute care and long-term care. The text also places a special emphasis on measures of quality, cultural sensitivity, and implications for health care policy. Written by experts in the field, *Dementia Care: An Evidence Based Approach* is an excellent resource for clinicians, students, healthcare administrators, and policymakers who aim to improve the quality of life of both the person with dementia and their informal caregiver.
