Thermal Nanosystems and Nanomaterials Sebastian Volz,2009-12-24 Heat transfer laws for conduction radiation and convection change when the dimensions of the systems in question shrink The altered behaviours can be used efficiently in energy conversion respectively bio and high performance materials to control microelectronic devices To understand and model those thermal mechanisms specific metrologies have to be established This book provides an overview of actual devices and materials involving micro nanoscale heat transfer mechanisms These are clearly explained and exemplified by a large spectrum of relevant physical models while the most advanced nanoscale thermal metrologies are presented

Nanoporous Materials Nick Kanellopoulos,2016-04-19 Having successfully replaced elements used in traditional pollution prone energy consuming separation processes nanoporous materials play an important role in chemical processing Although their unique structural or surface physicochemical properties can to an extent be tailored to meet specific process related requirements the task of charac **A Practical Guide to Surface Metrology** Michael Quinten,2020-01-01 This book offers a genuinely practical introduction to the most commonly encountered optical and non optical systems used for the metrology and characterization of surfaces including guidance on best practice calibration advantages and disadvantages and interpretation of results It enables the user to select the best approach in a given context Most methods in surface metrology are based upon the interaction of light or electromagnetic radiation UV NIR IR and different optical effects are utilized to get a certain optical response from the surface some of them record only the intensity reflected or scattered by the surface others use interference of EM waves to obtain a characteristic response from the surface The book covers techniques

ranging from microscopy including confocal SNOM and digital holographic microscopy through interferometry including white light multi wavelength grazing incidence and shearing to spectral reflectometry and ellipsometry The non optical methods comprise tactile methods stylus tip AFM as well as capacitive and inductive methods capacitive sensors eddy current sensors The book provides Overview of the working principles Description of advantages and disadvantages Currently achievable numbers for resolutions repeatability and reproducibility Examples of real world applications A final chapter discusses examples where the combination of different surface metrology techniques in a multi sensor system can reasonably contribute to a better understanding of surface properties as well as a faster characterization of surfaces in industrial applications The book is aimed at scientists and engineers who use such methods for the measurement and characterization of surfaces across a wide range of fields and industries including electronics energy automotive and medical engineering
