Microscopic traffic simulation models have been widely accepted and applied in transportation engineering and planning practice for the past decades because simulation is cost effective safe and fast To achieve high fidelity and credibility for a traffic simulation model calibration and validation are of utmost importance Most calibration efforts reported in the literature have focused on the informal practice with a specific simulation model but seldom did they propose a systematic procedure or guideline for simulation model calibration and validation The purpose of this study was to develop and evaluate a procedure for microscopic simulation model calibration and validation Three widely used microscopic traffic simulation models VISSIM PARAMICS and CORSIM were selected for model review and practice of model calibration and validation The validity of the proposed procedure was evaluated and demonstrated via two case studies including an actuated signalized intersection and a 5 mile freeway segment with a lane closure work zone The simulation results were compared against the field data to determine the performance of the calibrated models The proposed procedure yielded acceptable results for all applications thus confirming that it was effective for the different networks and simulation models used in the study Although the calibrated parameters generated the performance measures that were representative of the field conditions the simulation results of the default parameters were significantly different from the field data **Computing in Civil Engineering** ,2007 **Ingeniería de Tránsito** Rafael Cal y Mayor, James Cárdenas, 2018-04-10 La infraestructura del sistema vial es uno de los patrimonios más valiosos con que cuenta cualquier país por lo que su magnitud y calidad representa uno de los indicadores del grado de desarrollo del mismo En los últimos años con el aumento cada vez mayor del parque vehicular la circulación en las calles y carreteras se ha tornado más compleja motivo por el cual cobra gran importancia la realización de análisis de planeamiento proyecto y de operación más detallados de los sistemas viales donde es precisamente la ingeniería de tránsito aquella rama de la ingeniería llamada a tratar estos aspectos *Route 52 Reconstruction Project*,
