Multimedia Computing Sorel Reisman,1993-12-31 Multimedia computing MMC is becoming an increasingly popular technology The widespread use of personal computers together with significant scientific and economic breakthroughs in multimedia technology have begun to make multimedia a practical paradigm of end user computing from the interactive text and graphics model that has developed since the 1950s into one that is more compatible with the digital electronic world of the next century Although the field of multimedia computing is more than 30 years old the rapidly changing personal computing industry has become obsessed with a set of technologies products and practices that falls under the rubric of multimedia computing As the industry continues to race toward the 21st century it is becoming more and more difficult for people who are interested but not directly involved in the development of MMC to identify and understand the important and key issues that underlie this topic Multimedia Computing Preparing for the 21st Century addresses the modern environment of MMC by providing you with a contemporary and extensive source book for issues surrounding MMC today and trends and issues related to the next generation of end user computing utilizing the technologies of multimedia

Agent-Oriented Software Engineering Paolo Ciancarini, Michael

Wooldridge, 2003-07-31 One of the most important reasons for the current intensity of interest in agent technology is that the concept of an agent as an autonomous system capable of interacting with other agents in order to satisfy its design objectives is a natural one for software designers Just as we can understand many systems as being composed of essentially passive objects which have a state and upon which we can perform operations so we can understand many others as being made up of interacting semi autonomous agents This book brings together revised versions of papers presented at the First International Workshop on Agent Oriented Software Engineering AOSE 2000 held in Limerick Ireland in conjunction with ICSE 2000 and several invited papers As a comprehensive and competent overview of agent oriented software engineering the book addresses software engineers interested in the new paradigm and technology as well as research and development professionals active in agent technology

Architecture-Based Design of Multi-Agent Systems Danny Weyns, 2010-06-01 Multi agent systems are claimed to be especially suited to the development of software systems that are decentralized can deal flexibly with dynamic conditions and are open to system components that come and go This is why they are used in domains such as manufacturing control automated vehicles and e commerce markets Danny Weyns book is organized according to the postulate that developing multi agent systems is 95% software engineering and 5% multi agent systems

theory He presents a software engineering approach for multi agent systems that is heavily based on software architecture with for example tailored patterns such as situated agent virtual environment and selective perception and on middleware for distributed coordination with programming abstractions such as views and roles Next he shows the feasibility and applicability of this approach with the development of an automated transportation system consisting of a number of automatic guided vehicles transporting loads in an industrial setting Weyns puts the development of multi agent systems into a larger perspective with traditional software engineering approaches With this he opens up opportunities to exploit the body of knowledge developed in the multi agent systems community to tackle some of the difficult challenges of modern day software systems such as decentralized control location awareness self adaption and large scale Thus his book is of interest for both researchers and industrial software engineers who develop applications in areas such as distributed control systems and mobile applications where such requirements are of crucial importance
