

DRIVE BELT DEFLECTION

Drive belt length, condition, and deflection are all important for peak performance. To check and adjust drive belt deflection, use the following procedure.

NOTE: Make sure the drive belt is sitting at the top of the drive clutch sheaves.

1. Place a straightedge on top of the drive belt. The straightedge should reach from the drive clutch on the top of the drive clutch.
2. Using a stiff wire centered between the drive clutch and drive clutch, push down on the drive belt per example to measure deflection. Note the amount of deflection on the ruler at the bottom of the straight edge. The deflection should be at 1 1/4 in.

090200

NOTE: Push down on the belt with the ruler only until the bottom of the belt flexes upward; then read the amount of deflection.

3. To correct drive belt deflection, measure the clearance between the clutch, measure or add drive washers to the adjuster, and install the adjuster.

NOTE: Adding shim washers will decrease belt deflection; removing shim washers will increase belt deflection.
