T Rex And The Crater Of Doom:

T. rex and the Crater of Doom Walter Alvarez, 2013-06-25 Sixty five million years ago a comet or asteroid larger than Mount Everest slammed into the Earth inducing an explosion equivalent to the detonation of a hundred million hydrogen bombs Vaporized detritus blasted through the atmosphere upon impact falling back to Earth around the globe Disastrous environmental consequences ensued a giant tsunami continent scale wildfires darkness and cold followed by sweltering greenhouse heat When conditions returned to normal half the plant and animal genera on Earth had perished This horrific chain of events is now widely accepted as the solution to a great scientific mystery what caused the extinction of the dinosaurs Walter Alvarez one of the Berkeley scientists who discovered evidence of the impact tells the story behind the development of the initially controversial theory It is a saga of high adventure in remote locations of arduous data collection and intellectual struggle of long periods of frustration ended by sudden breakthroughs of friendships made and lost and of the exhilaration of discovery that forever altered our understanding of Earth s geological history **T. Rex and the Crater of Doom** ,2019-04-09 *Bibliotheca Gockingana, s. catalogus librorum ... Hen. Gockinga ,1773* *Asteroids* Curtis Peebles, 2016-04-26 Asteroids suggest images of a catastrophic impact with Earth triggering infernos tidal waves famine and death but these scenarios have obscured the larger story of how asteroids have been discovered and studied During the past two centuries the quest for knowledge about asteroids has involved eminent scientists and amateur astronomers patient research and sudden intuition advanced technology and the simplest of telescopes newspaper headlines and Cold War secrets Today researchers have named and identified the mineral composition of these objects They range in size from 33 feet to 580 miles wide and most are found in a belt between the orbits of Mars and Jupiter Covering all aspects of asteroid investigation Curtis Peebles shows how ideas about the orbiting boulders have evolved He describes how such phenomena as the Moon s craters and dinosaur extinction were gradually and by some scientists grudgingly accepted as the results of asteroid impacts He tells how a band of icy asteroids rimming the solar system first proposed as a theory in the 1940s was ignored for more than forty years until renewed interest and technological breakthroughs confirmed the existence of the Kuiper Belt Peebles also chronicles the discovery of Shoemaker Levy 9 a comet with twenty two nuclei that crashed into Jupiter in 1994 releasing many times the energy of the world s nuclear arsenal Showing how asteroid research is increasingly collaborative the book provides insights into the evolution of scientific ideas and the ebb and flow of scientific debate
