Data, New Technologies, and Global Imbalances Georges Kotrotsios, 2021-03-03 We are familiar with the idea that technology is neutral and that its impact depends only on how it is used This traditional view has however become untenable Because of its nature and its complex interplay with industry the economy and society technology is no longer neutral This change is being driven by the pervasiveness of data which today are generated everywhere at an unprecedented pace because several technologies are currently reaching maturity Data shape the world around us in a trend that is commonly referred to as digitalization This trend is apparent in every aspect of our lives ranging from our personal environment and health to transportation energy generation and management and industry Digitalization itself generates value enabling the creation of
