**The Colour, Light and Contrast Manual** Keith

Bright, Geoffrey Cook, 2010-01-06 Endorsed by the Society of Light and Lighting this practical book offers comprehensive guidance on how colour light and contrast can be incorporated within buildings to enhance their usability The book provides state of the art clear guidance as well as a valuable information source for busy professionals involved in the design or management of new and existing environments The ways colour light and contrast are used within built environments are critical in determining how people interact with the space and how confident safe and secure they will feel when doing so They also have a major influence on a person's sense of well being and their ability to use the environment independently and without undue effort Understanding how to use colour and contrast and how they are influenced by both natural and artificial lighting is vital for all those involved in the design and management of the environments and spaces we all use In recent years there has been a considerable amount of work undertaken to further our understanding of how colour light and contrast affect emotion and sensory abilities and how they can assist or hinder people in their everyday lives Other publications consider these issues individually but The Colour Light and Contrast Manual designing and managing inclusive built environments draws knowledge and information together to produce a unique comprehensive and informative guide to how the three elements can work together to improve the design and management of environments for us all Supporting website at [www.wiley.com/go/brightandcook](http://www.wiley.com/go/brightandcook)

*Interdisciplinary Design* Hanif Kara, 2022-03-07

Architects and engineers both claim to be designers though how they define design and the approaches they use to realize it vary widely However their interaction has also created some of the world's most memorable enduring and impressive buildings The unprecedented impact of digital technologies illuminates the complexity and non linearity of the process that these designers go through while massively expanding both the ability to visualize and represent forms and to analyze their structural behavior It has obviously changed both architecture and engineering and so also the potential for interaction between them Interdisciplinary Design began as a course at Harvard GSD attended by graduate students in architecture and also by MIT graduate students in structural engineering and computation In this course students and instructors examined a series of built projects in order to develop new viewpoints and communication across disciplinary boundaries in teaching practice and construction
