The Educational Times and Education Outlook ,1926

Everyday Matters in Science and Mathematics Ricardo Nemirovsky,Ann S. Rosebery,Jesse Solomon,Beth Warren,2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in

mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events. It makes the case that students' everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics. The contributions of 13 research teams are organized around three themes: 1 the experiences of students in encounters with everyday matters of a discipline; 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline; and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline. As a whole, the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning. At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning. Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events. This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning-making experiences. Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field: thinking about learning. Further, it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed.

Everyday Matters in Science and Mathematics: Studies of Complex Classroom Events is an important resource for researchers, teacher educators, and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design.

The Expedition Patricia B. Kaplan, 2021-05-18 Trish accidentally time travels to Lieutenant Colonel Custer's army camp during its final preparations for the 1873 Yellowstone Expedition. Luckily for her, she has her old style flip cell phone with her along with a ballpoint pen and plastic reading glasses. Even luckier, she is befriended by the regiment's surgeon who is officially in charge of her. He soon believes her story that she is from the future and quickly realizes he can profitably take advantage of her knowledge of modern medicine and future inventions from automobiles to X-rays. But his female assistant is not as enamored with Trish as he is, finding her to be a real pain to deal with. Trish's 21st-century idioms and crudely blunt language make her a misfit in the crowd of 19th-century Army officers and young soldiers, although they certainly enjoy being around her. Trish also discovers how time machines work.
